## Meridian CUSDDM

## Meridian CUSD \#223 2017-2018 <br> Data Report

Highland Elementary School

To the Meridian CUSD \#223 Board of Education:
The following data report includes much information about the quantifiable data collected at Highland School the past year and in some cases for the past 2-3 years. This is being shared with the Board of Education, Superintendent, Leadership Team, Community, Teachers, and Staff.

## Comprehensive Data Examination

My intent is to provide Central Office and the Board of Education a solid understanding of Highland Elementary School's performance and tracking as measured by several indicators. For each group of data presented, I will include:

- Explanation of what is being measured
- How it is being measured
- General reaction to the data
- Critical questions about the subject that should be considered moving forward
- A graphic (if possible).

## HIGHLAND ATTENDANCE

- What is being measured?

The attendance of all boys and girls is being documented month by month with a comparison from the previous school year. The data below focuses on the average attendance for Highland School.

- How is it being measured?

This data is taken from daily attendance records as documented on a daily basis by classroom teachers and the Highland attendance secretary. This is important as students' academic success can be related to school attendance. I will share school wide attendance data below and compare it to the previous school year.

Highland Attendance Rates

| August | 97.68\% | 95.03\% | -2.65\% | 96.33\% | +1.3\% | 97.43\% | +1.1\% |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| September | 97.24\% | 96.50\% | -.74\% | 96.22\% | -.28\% | 97.03\% | +0.81\% |
| October | 95.60\% | 96.11\% | 0.51\% | 96.48\% | +.37\% | 95.63\% | -0.85\% |
| November | 96.09\% | 93.46\% | -2.63\% | 96.50\% | +3.04\% | 96.41\% | -0.09\% |
| December | 95.02\% | 92.16\% | -2.86\% | 96.26\% | +4.1\% | 93.22\% | -3.04\% |
| January | 96.35\% | 94.86\% | 1.49\% | 94.93\% | +.07\% | 95.20\% | +0.27\% |

## Comparison to

 previous year> First Grade
4 months
higher
6 months
lower

## Merilian CUSDDM

- General Reaction

Kindergarten and $2^{\text {nd }}$ grade had increased attendance rates over the previous year's same grade. Prekindergarten and $1^{\text {st }}$ grade had decreased attendance rates over the previous year's same grade. Kindergarten and second grade had increased attendance rates for a majority of the months during this school year.

Prekindergarten attendance rate was the highest in the building at 96.1\%. Kindergarten was the lowest at 95.37\%.
Second grade had 8 of the months higher than the previous year second grade class and 2 of the months lower than the previous class.

Building average month by month - Prekindergarten and $2^{\text {nd }}$ grade had higher attendance rate percentage than the building average. Kindergarten and $1^{\text {st }}$ grade had lower attendance rate percentage than the building average.

Prekindergarten had 8 of the months higher than the building average while $2^{\text {nd }}$ grade had 6 of the months higher than the building average.

The yearly attendance average went up for the $2^{\text {nd }}$ year in a row.

This past year 18 students were referred to the truancy officer in comparison to 16 the year before and 32 the previous year. This included 11 kindergartners, 4 first grade students and 3 second grade students.
The previous year there were 7 kindergarten students referred and 10 the year before that.
The previous year there were 3 first grade students referred and 9 the year before that.
The previous year there were 6 second grade students referred and 13 the year before that.

These 18 students missed a range of 10-38.5 days for a total of 395.5 days for an average of nearly 22 days per student. Before a truancy referral was made, an attendance letter was sent home addressing attendance. If attendance did not improve, a truancy referral was made. Two (2) of the students (brothers) that received a truancy referral moved out of the district on March 1. These two students missed 15 days each.

- Questions
- What attendance incentives can be offered? When? Students earned perfect attendance awards and incentives each quarter and semester. Perhaps this should be done monthly starting with August.
- How can kindergartners be identified early and encouraged to increase their attendance this coming year? They have had the lowest monthly average for the past three years. Their average attendance is improving each year, but they have the most students receiving truancy referrals.
- What supports do kindergarten families need to support good attendance?
- Why did the attendance rate go up?
- What are we doing to support the varying needs of students with excessive absences? Is it working?
- What can be done to increase the attendance rate specifically in the months of January and March?

## DISCIPLINE

- What is Being Measured

The next pages will cover the number of Positive Behavior Intervention and Support (PBIS) major and minor behavior referrals for this past year and the two years previous to that. All of this data is reviewed monthly with the PBIS committee and during monthly staff meetings.

- How is it Measured

Teachers and support staff are trained to support the same acceptable norms of behavior all throughout the school. These major and minor referrals are written up on duplicate copies and are sent home for parents to sign and return. Additionally, a phone call or parent contact like e-mail is made before the child arrives home with the referral. These are entered into the SWIS electronic system each month to monitor monthly infractions in both majors and minors. Minors can be handled by teachers and support staff. Parent communications are documented in the child's PBIS folder. Four minors in a quarter result in a major. Majors result in a phone call from the principal along with an after school detention. Majors are handled by the building principal. Discipline data collected is used for school wide goal setting and quarterly celebrations.

- Graphic Representations of Majors and Minors follow.

| 15K, $251^{\text {st }}, 12$ 2nd |  | 78 | $22 \mathrm{~K}, 421^{\text {st }}, 142 \mathrm{nd}$ |

Majors were up by 26 for the year. First graders had 27 more majors as first graders than they did as kindergartners.

Majors were up on 8 of the months. Majors were down in December over the previous year.

Kindergartners had 7 more majors this year than last year. Second grade had $\mathbf{2}$ more majors than last year.

- General Reaction

The PBIS Graph shows three years of data. During the $16 / 17$ school year, the minor data was relatively consistent with the previous year. Majors indicated a 50\% increase. As noted, first graders had 27 more majors than they did as kindergartners. Much of this can be attributed to one first grade student.

Spikes in majors occurred during the months of October and February.
Teachers have been using this system for 6 years now and are utilizing the program as it was intended. Second graders had a drop of nearly $45 \%$ in majors in comparison to their $1^{\text {st }}$ grade year.

Kim Hiort has been the PBIS Coach for two years. Previous to that, she had been the Monroe Center coach. Highland is well aligned with Monroe Center on expectations and consequences.

- Questions
- What additional interventions should occur with the one identified student? What support will the receiving second grade teacher need to help this student?
- What supports can be given during the month of February? What can be done to reinforce the PBIS program to result in fewer referrals during the month of February?

## CERTIFIED PERSONNEL EVALUATION PROCESS

- What is Being Measured

Non tenured teachers are observed at least twice formally and twice informally during their evaluation cycle the first 4 years. Tenured teachers are evaluated every other year and are evaluated formally at least once and informally observed with written notes and feedback each semester during their two year evaluation cycle. The observation process utilizes the Danielson Framework and is completed using the Evaluwise system. Support staff received evaluations again this year.

- How is it Measured

This is measured utilizing the Evaluwise system and counting up the total in all areas that were assessed and rated.

Meridian District Component Ranking Counts Highland Comparison

| Domain/Component | E-Dist | E-HGS | P-Dist | P-HGS | NI-Dist | NI-HGS |

| 4e-Professional Growth | $35.82 \%$ | $27.78 \%$ | $62.69 \%$ | $72.22 \%$ | $1.49 \%$ | $0.00 \%$ |
| 4f-Showing Professionalism | $38.81 \%$ | $33.33 \%$ | $59.70 \%$ | $66.67 \%$ | $1.49 \%$ | $0.00 \%$ |

- In this chart, district percentages are figured out in each domain component for Excellent, Proficient and Needs Improvement. The percentages were figured by taking the number of teachers that were rated in the district at that level divided by the total number rated in the district.
- To find the average percentage at Highland, the total number of teachers receiving a ranking at Highland for Excellent, Proficient, and Needs Improvement was divided by the total number of teachers at Highland that received a rating.
- A comparison was then made between district averages and Highland averages for each area. The blue highlighted areas are domain components that were selected for the principal to look more closely at to determine what professional development should take place to more closely align the building level evaluations to the district evaluations if necessary.

## Meridian CUSDDM3

General Reaction
Three of seventeen or $18 \%$ of the certified teacher evaluations were rated as proficient. Fourteen of seventeen or $82 \%$ of the certified teacher evaluations were rated as excellent.

180/396 or 45.5\% of all Highland 2016/2017 rankings were rated as Excellent. In the district, 531/1475 or $36 \%$ of all component rankings were rated as Excellent.

214/396 or 54\% of all Highland 2016/2017 rankings were rated as Proficient. In the district, $895 / 1475$ or $60.7 \%$ of all component rankings were rated as Proficient

2/396 or .5\% of all Highland 2016/2017 rankings were rated as Needs Improvement or Basic. In the district, $49 / 1475$ or $3.3 \%$ of all component rankings were rated as Needs Improvement or Basic.

In comparison to the district average, Highland Grade School had fewer rankings in the Excellent rating in 2E - Physical Space, 3A - Communication with Students, 4A - Reflecting on Teaching, and 4E - Professional Growth.

In comparison to the district average, Highland had a significantly higher percentage of teachers rated in the Excellent category in 1B - Knowledge of Students, 1E - Coherent Instruction, 2A - Respect and Rapport, 2B - Culture for learning, 2C - Managing Classroom Procedures, 2D - Student Behavior, and 3C - Engaging Students in Learning.

In comparison to the district average, Highland teachers were ranked significantly higher as Proficient in the following areas; 3A - Communication with Students and 4A - Reflecting on Teaching.

This was the third year where administrators looked at all district rating data and analyzed similarities and differences. This practice should continue. This year, professional development took place with Dr. Voltz to look at and address inter-rater reliability and informal observations.

- Questions
- How can teachers be supported in those areas listed above, $2 \mathrm{E}, 3 \mathrm{~A}, 4 \mathrm{~A}$, and 4 E where a smaller percentage of teachers were rated excellent as compared to district average?
- What professional development can occur at each staff meeting related to growth in these areas?
- How can teachers be encouraged to formally reflect on lessons each day?
- Did the professional development that occurred this year for administrators show closer inter rater reliability?

SLO (Student Learning Objective) - A Student Learning Objective is a specific goal that teachers set for student learning at the beginning of the school year for the students to achieve by the end of the semester or school year. The teachers in our district set specific learning goals for students this year that was used to determine growth and effectiveness of instruction. Goals are set after an initial assessment is given to determine students' present levels.

Goals were set and submitted to the principal for approval.
Teachers set two different SLO's for each student in a class of students based on their initial performance on the course assessment.

SLO Score calculations are used then in conjunction with the teacher's professional practice evaluation to determine their teacher rating. If a teacher has $84.5 \%$ or more of the students meeting the target, the teacher earns an excellent in the SLO Score calculation. A score of 69.5-84.49\% earns a teacher a rating of Proficient. A score of 54.5 to $69.49 \%$ earns a teacher a ranking of needs improvement. A score below $54.49 \%$ earns a teacher an unsatisfactory.

Each of these two SLO's are scored independently then the two scores are added and divided by 2 to determine the final SLO Score calculation.

This year at Highland, 11 of 21 earned the Excellent rating on both of their SLO's.
An additional 6 teachers of 21 earned Excellent SLO rating by having one SLO in the excellent range and one in the proficient range. When these two were averaged, they came up to $84.5 \%$ or higher.
Three of 21 teachers earned the Proficient SLO rating when the two SLO's were combined.
One of 21 teachers earned a Needs Improvement SLO rating when the two SLO's were combined.
The SLO's contributed to many teachers earning an excellent on their evaluation as the excellent SLO rating bumped their Proficient professional practice (observational model) to Excellent with their SLO.

- Questions
- Are the goals being set high enough with enough rigor?
- This was a practice year and new Star testing was adopted. Will this year's baseline data be useful in setting more rigorous goals for next year? How should goals be set using this baseline data?
- How can teachers be supported while setting higher goals?
- What professional conversations should take place with this year's data as teachers set goals for next year?
- How can teachers be encouraged to set higher goals?
- The Star Data shows that in some classes and grades, fewer than $85 \%$ are making the expected gains as projected. How can the SLO's be written more in line with projections made by Star?

## NON - LOCAL ASSESSMENT (STAR360 Assessments)

Star 360 is a computer based assessment program designed to assess students in Star Reading, Star Math, and Star Early Literacy to give teachers useful data about student learning. Teachers can determine precisely what students have mastered and what goals they still need to achieve. Teachers gain valid and reliable insights to make informed decisions to track each student's learning and to adjust instruction and interventions based on each individual's progress.

The Star Assessments are taken three times during the school year in the fall, winter, and spring. Additionally, students that are not making expected or projected progress are progress monitored every two weeks to assess progress and adjust interventions.

- How is it Measured

Star assessments were first used during the 2016-17 school year by all kindergarten, first and second grade teachers in math and reading. Baseline data was gathered to determine what students know and are able to do. Learning goals are set based on their performance. Intervention groups are created based on performance.

- General Reaction

The Star assessments are major assessments being utilized at Highland to measure student performance and growth all through the year. Progress monitoring occurs at additional times throughout the school year with students that are not making projected or expected progress.

- Questions
- What can be done to make sure that all students are making sufficient yearly progress at the kindergarten, first and second grade levels?
- What supports can be put into place for students?
- What measures should be looked at when students exceed the targets for their grade and age?
- Is the data provided guiding instruction for groups and individuals?
- How meaningful is this data to our teachers?
- Graphic Representation of Data Follows

- Questions
- Why is math growing at a slower rate in $1^{\text {st }}$ grade and at a faster rate in $2^{\text {nd }}$ grade?
- How can the successes with $2^{\text {nd }}$ grade math and special education math be shared with first grade?

Highland - Avg. Grade Equivalent Growth

- Questions
- Why are the $1^{\text {st }}$ graders growing at a rate below 1.0 in Reading?
- How can the successes with $2^{\text {nd }}$ grade be replicated with $1^{\text {st }}$ graders?

## Meridian CUSDD23

- Questions
- What did $2^{\text {nd }}$ grade teachers do to have three of four teachers have an SGP above $80 \%$ in math?
- Why does $1^{\text {st }}$ grade SGP indicate only one $1^{\text {st }}$ grade teacher had SGP above $60 \%$ while the other three teachers' averages are between $25 \%$ and $55 \%$ ?
- What can first grade teachers learn from $2^{\text {nd }}$ grade teachers to boost these averages?
- Are Star suggested interventions being followed at first and second grades?
- We had one first grade teacher have an SGP of 62\%. The three remaining first grade teachers ranged from $25 \%$ to $56 \%$. What did that teacher do differently?
- What needs to happen in these first grade classrooms to raise the Student Growth Percentile to above $65 \%$ in all classrooms?
- What can we do to enrich higher achieving students?
- What are second grade teachers doing differently than first grade teachers?
- Are STAR suggested interventions being followed at $1^{\text {st }}$ grade and $2^{\text {nd }}$ grade?
- What needs to happen in these $1^{\text {st }}$ grade classrooms to raise the Student Growth Percentile to above $65 \%$ in all classrooms?

- Questions
- Why did only one teacher's class have a Student Growth Percentile above $65 \%$ while the other 4 classes ranged from 44\%-60\%?
- What did one kindergarten teacher do differently than the other 4? How can that be shared?
- What can the other kindergarten teachers learn from this kindergarten teacher to boost these averages?
- Are Star suggested interventions being followed at kindergarten in all classes?
- What needs to happen in these kindergarten classrooms to raise the Student Growth Percentile to above $65 \%$ in all classrooms?
- What can we do to enrich higher achieving students?

- Questions
- Why did second grade reading SGP averages range from $73 \%-95 \%$ while first grade only averaged $38 \%$ 60\%?
- What are second grade teachers doing differently than first grade teachers?
- Are STAR suggested interventions being followed at $1^{\text {st }}$ grade and $2^{\text {nd }}$ grade?
- What can $1^{\text {st }}$ grade teachers learn from $2^{\text {nd }}$ grade teachers to boost these averages?
- What needs to happen in these $1^{\text {st }}$ grade classrooms to raise the Student Growth Percentile to above $65 \%$ in all classrooms?

## 2016/2017 School Improvement Review

## SIP Review

- What is Being Measured

School wide goals are set by administrator and teachers to improve student achievement. Areas of growth are determined by looking at achievement data and the standards that students are expected to meet.

- How is it Measured

## Highland SIP Goal \#1 for 2016-17:

Reading Goal $-75 \%$ of the Students at Highland School will demonstrate one year of growth in K, 1 , and 2 as measured by the Star Reading Assessment.

## Reading Goal -

40 of 117 students or $34 \%$ of first grade students demonstrated one year of growth.
First graders grew on average .7 of one year of growth in reading.
72 of 100 students or $72 \%$ of second grade students demonstrated one year of growth. Second graders grew on average 1.3 years of growth in reading.
112/217 students or $\mathbf{5 2 \%}$ of the students at Highland demonstrated one year of growth. The building average was .9 of one year of growth in reading.

## Highland SIP Goal \#2 for 2016-17

Math Goal - 75\% of the students at Highland School will demonstrate one year of growth in math as measured on the Star Math Assessment.

Math Goal -
62 of 95 students or $65 \%$ of first grade students demonstrated one year of growth.
First graders grew on average 1.1 years of growth in math.
70 of 86 students or $81 \%$ of second grade students demonstrated one year of growth.
Second graders grew on average 1.5 years of growth in math.
132/181 students or $\mathbf{7 3 \%}$ of the students at Highland demonstrated one year of growth.
The building average was 1.2 years of growth in math.

- General Reaction

By the end of the 2016-2017 school year, 52\% of the students met their individual goals for STAR Reading. By the end of the 2016-2017 school year, $73 \%$ of the students met their individual goals for STAR Math.

- Critical Questions/Observations
- This was the first year using STAR.
- Graphic Representation of Data
- All charts and graphs preceded this page.

BUILDING BUDGET

- What is Being Measured

Funds have been tracked in all areas for classroom supplies.

- How is it Measured

After the district budget is made and approved, the Highland building budget line items are tracked on an Excel spread sheet and budgets are managed to stay within budget for the entire school year.

- General Reaction

All budgets were managed well and stayed on track for the entire school year. The regular classroom supply budget line item was not fully utilized. The full budget for Highland Classroom Supplies was $\$ 20,000$. At the end of the year $\$ 722.06$ or $3.6 \%$ of the budget was not expended.

All other budgets were fully or will be expended as budgeted.

- Critical Questions
- Funding in prekindergarten is being spent now to fully utilize that budget. Can those funds be utilized to pay for more of the salary of the prekindergarten teachers? The grant has now been amended to cover $100 \%$ of 2 prekindergarten teacher salaries for the 2017/2018 school year. Each class will have access to $\$ 700$ for classroom supplies for the 2017/2018 school year and funds have been put into the grant to pay for Leader in Me costs.

## BUILDING SUBSTITUTE USAGE

- What is Being Measured

This is a review of both certified teaching sub usage and paraprofessional sub usage during the 2015/2016 and 2016/2017 school years.
This reviews all types of absences inclusive of sick, personal, family leave and professional days.

- How is it Measured

Substitute usage has been tracked by sick, personal, family leave, and professional days. Teachers and support staff must use a half day or a full day.

- General Reaction

Illness went down by about $18 \%$ from 204 days to 168 days. This could be a reflection of the incentives put in place for teachers to double their sick days for unused days. An increase of 30 professional days or about $65 \%$ occurred during the 2014/2015 school year. More professional days were utilized this year for team meetings and IEP meeting days as a result/reflection of the teacher contract.

- Critical Questions
- How can attendance for support and teaching staff be improved?
- Presentation of Data

## Certified Staff

2015/2016
Family Leave 41 days
Illness 164.5 days
Personal 24.5
Professional 90 days
Medical leave 65 days

2016/2017
No days (- 41)
271 - Up 106.5 days
30 - Up 5.5 days
100.5 days - Up 10.5 Days

No days (-65)
16.5 more days than $2015 / 2016$

## Professional Work By Teachers

Work was done in grade level team PLC meetings - 27 days

4.5 days

1 day
RTI/IEP Meetings
4 days
Prekindergarten Consortium
2 days

## Meridian CUSDDM3

| Bilingual Teacher Star training | .5 days |
| :--- | :--- |
| Counselor Professional Workshop/Conference | 3 days |

## Support Staff Absences

2015/2016
Illness 244.5
Personal 20 days
Professional 1 day

2016/2017
100 days - down 144.5 days
27.5 days - up 7.5 days
3.5 days - up 2.5 days

## Professional Work By Support Staff

CPI training
Bilingual conference
1.5 days

2 days

## 2016/2017 notes:

There were 10.5 more professional development days for teachers.
Certified staff missed 16.5 days more of absence this year than last year.
Support staff missed 134.5 days fewer than last year.

## SPECIAL EDUCATION

- What is Being Measured

The number of students identified to receive special education services. Students are also identified for the percentage of time receiving special education services. The goal is to have students receive the lowest percentage that they can while remaining successful in their educational program.

- How is it Measured

The graphics that follow are from a Powerpoint presentation prepared by Jennifer Kitzmiller for our district at the end of this school year. The percentages are figured by dividing the number of minutes in special education with the number of total instructional minutes available in a school day. These special education services are documented as minutes on an individual education plan where a student receives additional support and services to support their academic growth. Students should be in the regular education classroom for as much time as possible to make their placement as appropriate as possible to deliver educational services in the least restrictive environment.

- General Reaction

A lot of documentations are made and students receive interventions when they are not making expected progress. The interventions are carried out to find other ways that students may learn. If a student still shows a lack of growth with multiple interventions and time a student may be found eligible for special education through a team process. Once students are identified an IEP is developed to set specific learning goals and a plan of action for helping the student to achieve these specific learning goals. The amount of time a child is out of the regular classroom is utilized to determine regular education and special education percentages. The educational team has made a determination that the student will be best served outside of the regular education classroom to receive services to help them attain their individual educational goals.

- Critical Questions
- Are our students making educational gains as a result of their IEP special education services?
- Are the students making up gains that will make their IEP and services no longer necessary in the next few years?
- Are students receiving services in the most appropriate environment and are they being mainstreamed when and where appropriate?
- Why are there higher percentages of students receiving special education services at Highland than the district average?
- Why are the percentages of students in the least restrictive environment at Highland lower than the targeted percentages?
- How are paraprofessionals being used to support these students in the regular education classroom?
- What training needs to be done for the paraprofessionals to best meet the needs of the students?
- Graphic Representation of Data
- Please see next sheet

## Meridian CUSDDM3

Meridian CUSD \#223 2017-2018
Data Report

Monroe Center Grade School

## Meridian CUSDD23

Board of Education:

Throughout the 2016-2017 school year I performed a close read and analysis of accessible and applicable information to consistently understand the contextual situation of Monroe Center School. I will continue to complete thorough write-ups of the information in order to share my findings with the Board of Education, Superintendent, District Leadership Team, and building staff to ensure total transparency in communication.

## Comprehensive Data Examination

My intent is to provide the District Office and Board of Education a solid understanding of Monroe Center School's performance as measured by several indicators over the past several years. When data are available, and it is appropriate, I have compared our performance to that of other schools in our area to provide additional contextual understanding.

For each group of data presented, I will include:

- Explanation of what is being measured
- How it is being measured
- General reaction to the data
- Critical questions about the subject that should be considered moving forward
- A graphic (if possible)

## ATTENDANCE

- What is Being Measured

The percentage of students who attend Monroe Center School on a daily basis is the focus of this measurement. The information is reported to the state of Illinois through our Student Information System (SIS) and then displayed on the Illinois Interactive Report Card. The data is used to as comparison data to other schools and as a fiscal component from the state.

- How is it Measured

Student attendance is reported and measured through the SIS (Skyward). The data is submitted to the state of Illinois at the conclusion of each school year.

- General Reaction

The attendance rate is comparable to previous years and surrounding school districts. During the 2014-2015 school year 4 students were referred to the truancy officer and attendance letters were sent home beginning with students who missed 5 or more days.

- Critical Questions
- Is there a population of students who are continually absent?
- What are we doing to support and follow up with chronically absent students of 10+ days?
- How do we connect with the truant student?
- What is the role of the truant officer after the initial referral is given?
- Is the attendance policy of 10 excused days impacting overall attendance?
- Could an attendance incentive improve our overall attendance rate?
- Graphic Representation of Data
- Please see next sheet

# Meridian CUSDDM 

## Meridian CUSDDM

|  | Truancy vs. Mobility |  |  |
| :---: | :---: | :---: | :---: |
| Student | Grade Level Entered <br> into District | \# of Entry/Withdrawals <br> From District | SES <br> Free/Reduced |
| 1 | K | None | No |
| 2 | 4 | None | No |

## DISCIPLINE

- What is Being Measured

The percent of discipline cases both minor and major based on the Positive Behavior Intervention and Support (PBIS) system. Minor discipline data is used locallyand major discipline cases are reported to the state.

- How is it Measured

Students receive minors or majors depending on the offense and are tracked using an electronic document shared by staff members. Minors are handled by teachers until a student receives a fourth minor in a quarter at which time it becomes a major. Minors result in a conference with the student, a parent contact, and/or an after school detention. Majors are handled by the administrator typically resulting in a detention. Discipline data collected is used for school wide goal setting and quarterly celebrations.

- General Reaction

Minors increased during the 2016-2017 school year. All teaching assistants, with one exception, have worked with PBIS before. This was not the case last year when we saw an increase in minors from the previous school year. Students entering MC have had PBIS in their school since K-2 and are familiar with the system.

- Critical Questions
- How can we better support our students who have 3 minors within a quarter?
- What can we do to support our at risk students?
- When reviewing the Disaggregated Student Discipline Data, $45 \%$ of the students on that list also have an IEP. That's almost a 5\% (one student) decrease over the 2015-2016 school year. What can be done to better support these students?
- When reviewing the Disaggregated Student Discipline Data, $36 \%$ of students on that list were Low SES as well. That's a $34 \%$ decrease from the 2015-2016 school year. Did teachers do anything to focus on our Low SES student?
- Graphic Representation of Data
- Please see next sheet

## Meridian CUSDDM3

'14-'15 Minors by Grade
'15-'16 Minors by Grade
'16-'17 Minors by Grade
$3^{\text {rd }}$ Grade $=89$
$4^{\text {th }}$ Grade $=111$
$5^{\text {th }}$ Grade $=157$
$3^{\text {rd }}$ Grade $=54$
$4^{\text {th }}$ Grade $=63$
$5^{\text {th }}$ Grade $=109$
$3^{\text {rd }}$ Grade $=98$
$4^{\text {th }}$ Grade $=49$
$5^{\text {th }}$ Grade $=130$

## Meridian CUSDDM

## Disaggregated Student Discipline Data

The chart shows the students with the most minors during the 2016-2017 school year. Students are separated by \# of minors, low socio-economic status, individualized education plan, attendance, and performance on

PARCC.

$\left.$| Student | Grade | \# of <br> Minors | Low SES | IEP | Attendance | 2016 <br> PARCC | 2016 <br> PARCC |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |  |
| (M/E) |  |  |  |  |  |  |  | | Math |
| :---: |
| (M/E) | \right\rvert\,

- $45 \%$ of the students with the most minors are students with an IEP.
- $36 \%$ of the students with the most minors are low SES students.
- Approximately $90 \%$ of the students with the most minors did not meet PARCC standards.
- One student on this list was also on the list last year; however, the other ten were not on the list last year.

## Meridian CUSDDM3

- The chart above shows the amount of minors that teachers and paraprofessionals gave out throughout the school year. I did not include teachers or paraprofessionals who gave out five or less minors.
- Some thoughts:
- There is one particular class that the teacher only awarded three minors the entire year. Having been in that classroom and dealt with her students on a regular basis, I find myself wondering how this is even possible. The issues her students were having with substitute teachers alone warranted numerous minors. This is probably why behavior was so poor when there was a substitute teacher in the room.
- I was surprised to see that Mrs. Bartlett's numbers were so high. Mrs. Bartlett does things "by the book," so that could attribute to the higher numbers in her room.
- Mrs. Benesh awarded 24 minors, and they were all to the same four kids. That's interesting to me.
- I'm curious to know what kind of behavior management system these teachers have in place (i.e. clip up, clip down or turn the card or nothing at all).
- Out of the 17 people on the list, six of them are paraprofessionals.

## TEACHER EVALUATION

- What is Being Measured

Teacher performance in the classroom is evaluated using Charlotte Danielson's Framework for Teaching. They are evaluated in four domains; Planning and Preparation, The Classroom Environment, Instruction, and Professional Responsibilities, with 22 components altogether. Non-tenured teachers are formally evaluated twice per year and tenured teachers are formally evaluated once every other year. All teachers are also evaluated informally throughout the year.

- How is it Measured

In the Framework for Teaching, teachers can be rated excellent, proficient, needs improvement, or unsatisfactory. Based on the Certified Staff Evaluation Plan with the SVEA, teachers need 13 or more components rated excellent with none others below proficient in order to be rated excellent, no more than 3 components rated needs improvement with none unsatisfactory in order to be rated proficient, 4 or more components rated needs improvement with none unsatisfactory in order to be rated needs improvement, and at least one component rated unsatisfactory in order to be rated unsatisfactory.

- General Reaction

All teachers at Monroe Center were rated as proficient or excellent. We had one teacher receive a needs improvement in Domain 3.

- Critical Questions
- What can we do to improve inter-rater reliability among administrators?
- How can staff be supported to understand that a rating of proficient or needs improvement in an individual component is an area for growth and does not have a negative stigma?
- When can PD be offered to faculty to help them understand the attributes aligned with each indicator?
- Graphic Representation of Data
- Please see next sheet

## NON - LOCAL ASSESSMENT (PARCC)

- What is Being Measured

The Partnership for Assessment of Readiness for College and Career (PARCC) tests were designed to measure performance against a higher set of standards. The tests go beyond multiple choice questions and require students to use skills like analyzing, problem solving, and writing effectively. All of these skills are necessary in order for students to be successful in the real world. Elementary students are tested in the area of English Language Arts (ELA) and Math.

- English Language Arts assessments will demonstrate:
- Whether students can read and comprehend texts of varying complexitities.
- How well students can integrate information across sources to make a persuasive argument.
- The degree to which students can use context to determine the meaning of academic vocabulary.
- Math assessments will demonstrate:
- Whether students understand and can use important math ideas, including number sense, algebraic thinking, geometry, and data analysis.
- The extent to which students can use math facts and reasoning skills to solve real-world problems.
- How well students can make math arguments.
- How is it Measured

A student's overall score, out of a possible 850, is reports to parents. Students are then categorized accordingly into one of the following levels.

- Level 1 - Did not meet expectations
- Level 2 - Partially met expectations
- Level 3-Approached expectations
- Level 4 - Met expectations
- Level 5-Exceeded expectations
- General Reaction
- Critical Questions
- Graphic Representation of Data
- Please see next sheets

# Meridian CUSDD23 

PARCC Data for Monroe Center

## Meridian CUSDDM

PARCC Comparison / LOW SES

PARCC Comparison / Local

NON - LOCAL ASSESSMENT (ACCESS)

- What is Being Measured

ACCESS is a standard's based criterion referenced English language proficiency test designed to measure English language learners social and academic proficiency in English. It assesses social and instructional English as well as the language associated with language arts, mathematics, science, and social studies within the school context. It is a universal screener given to students K-12 who are identified as English language learners.

- How is it Measured

ACCESS was used during the 2016-2017 school year by the ELL teacher to assess ELL student's proficiency levels of English in areas of listening, speaking, reading, and writing with these students. In January 2014, new proficiency levels were implemented. Students who obtain an overall composite proficiency level of 5.0 as well as a reading proficiency level of 4.2 and a writing proficiency level of 4.2 on this annually administered test are considered to be English language proficient. Below is the breakdown of how the ACCESS test is scored.

| Overall composite |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Listening 15\% | Speaking <br> 15\% |  |  | Writing $35 \%$ |
| Oral language composite <br> Literacy composite <br> Comprehension composite |  |  |  |  |

- General Reaction

Overall, the reaction to the 2017 ACCESS data was below average. During the 2016-2017 school year, we did not have any students meet proficiency requirements, therefore, all twenty students continue to remain eligible or ESL services. During the 2015-2016 school year, we had 15 students meet requirements. Although these students tested out/met proficiency, most of them continued to receive ESL services.

From WIDA: To meet language demands of college- and career-ready state standards, WIDA is raising the bar for language proficiency. Students will need to demonstrate higher language skills in 2016-2017 to achieve the same proficiency level scores (1.0-6.0). The changes in ACCESS for ELLs 2.0 scores in 2017 are expected to impact students in the following ways: some students' scores may go down and fewer students may exit program support.

Students who met proficiency during the 2016 testing, more than likely would not have met this year under the new scoring.

- Critical Questions
- How can we support the ELL students in writing proficiency?
- How can we better support our ELL students across the board?
- Graphic Representation of Data
- Please see next sheet

## Meridian CUSDDM3

4th Grade ACCESS

## Meridian CUSDDM3

NON - LOCAL ASSESSMENT (STAR 360)

- What is Being Measured

STAR 360 is a universal screening, progress monitoring, and data management system that can be used to support Response to Intervention. Target goals set by STAR are determined over time and across states to show grade level success. Reading assesses general reading proficiency and fluency. The mathematics domains assessed include number sense, operations, patterns and relationships, data and probability, measurement, data and statistics, geometry, and algebra.

- How is it Measured

STAR 360 was used during the 2016-2017 school year by classroom teachers. It was administered three times during the school year in the fall, winter, and spring. STAR 360 assesses reading fluency, reading comprehension, math computation, and math problem solving. All students who were identified for additional support (interventions) were also tracked to determine the effectiveness of the interventions. Students who were receiving interventions were assessed once a month using STAR 360. Some teachers chose to progress monitor all of their students once a month.

- General Reaction

Because STAR was new to the District this year, we are still working to determine which data pieces is best to focus on, use for SLOs, etc. We started the year off setting individual student goals using the scaled score (SS) data point. This is what teachers used to track their SLOs as well. Throughout the course of the year, STAR created a document that focuses on student growth percentile (SGP) for SLOs as well as tracking student growth. This isn't familiar to the administration or staff at this point; however, it is believed that we will be going to SGP for the 2017-2018 school year.

- Critical Questions
- What did $3^{\text {rd }}$ grade do to have three out of four teachers have an SGP of at least $70 \%$ for their class? Did they do so much better because they followed the intervention system that SAT suggested (interventions based on deficit areas identified through STAR benchmarking/progress monitoring)?
- We had one teacher have an SGP of $74 \%$ in $4^{\text {th }}$ grade and another with a $61 \%$. The three remaining teachers were in the $40 \%$. What did those two teachers do differently?
- $5^{\text {th }}$ grade was across the board ranging from $73 \%$ in one class to $39 \%$ in another class. What is happening in those classrooms?
- Are we getting the information we need when our students already score above the initial target? What can we do to continue to enrich are higher achieving students?

## ACADEMIC PERFORMANCE OF LOW SOCIO-ECONOMIC STATUS

- What is Being Measured

Low SES is a measure of a family's income in comparison to the total size of their family. This is measured primarily to ensure that schools are in compliance with the federal law regarding free and reduced lunch prices for students who are labeled through the process as having Low Socio-Economic Status. Additionally, schools look at this data frequently because students with Low SES often have different subsets of strengths and potential issues. When looking at academic data over time, most low SES students usually underachieve in comparison to non-low SES students.

- How is it Measured

Low SES is measured by federal guidelines measuring family size compared to family income. The breakdown of the guidelines for the ' 16 -' 17 school year is listed below.

| Household Size | Annual | Monthly | Twice Per Month | Every Two Weeks |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 1 | 21,978 | 1,832 | 916 | 8 |  |
| 2 | 29,637 | 2,470 | 1,235 | Weekly |  |
| 3 | 37,296 | 3,108 | 1,554 | 4,140 |  |
| 4 | 44,955 | 3,747 | 1,874 | 1,435 |  |
| 5 | 52,614 | 4,385 | 2,193 | 1,730 |  |
| 6 | 60,273 | 5,023 | 2,512 | 2,024 |  |
| 7 | 67,951 | 5,663 | 2,832 | 2,319 |  |
| 8 | 75,647 | 6,304 | 3,152 | 2,614 |  |
| For each additional <br> family member, add | 7,696 | 642 | 321 | 2,910 |  |

- General Reaction

The demographics of Meridian CUSD 223 are changing. Since 2010, the free and reduced population has increased $10 \%$. Since 2010, the free and reduced population has increased $8 \% .59 \%$ of the students at MC who are repeat offenders in regards to minors are free and reduced students. Half of the students who were referred to truancy were also from the free and reduced population.

- Critical Questions
- Is this population being served by the reading and math interventionists?
- As the numbers continue to rise, how do we better support these students?
- Is the newly formed student assistance team targeting this population?
- Graphic Representation of Data
- Please see next sheet and AIMS Web graphs above

Monroe Center: Low Socio-Economic Students

## Meridian CUSDDM3

## LOCAL ASSESSMENT

- What is Being Measured

The Performance Evaluation Reform Act (PERA) and SB7 states evaluations must use data and indicators of student growth as a significant factor in rating teacher performance. For this purpose starting in 2016-17, thirty percent of a teacher's evaluation must represent student growth by collecting multiple data points for each student over time. Teachers must choose 2 different types of tests such as a nationally normed, local to district, or specific to a course to use for the student growth portion of the overall evaluation rating.

- How is it Measured

Full implementation for local assessment started in 2016-17. Teachers administered mirrored assessments at the beginning and end of the school year. After pre-assessments are given, student learning objectives (SLO's) will be set for each student. Teachers will do a mid-point check with the students to determine instructional or SLO adjustments. At the end of the year post-assessments will be given and evaluated to see how many students reached their individual learning goals. Teachers used historical data from the no stakes year (20152016) to help create individual goals for their students.

- General Reaction

During the 2016-2017 school year teachers were able to pick what SLOs they wanted to use. Some chose to use STAR as a Type 1, while other administered two Type 3 assessments. A handful of teachers used a rubric or task oriented Type 2 assessment. Teachers had total choice over what they wanted to use. When conducting my SLO recap meetings with my staff, there were mixed reviews about what SLOs they would use last year. $3^{\text {rd }}$ grade seemed happy with their STAR results, as well as their pre/post assessments. They also set up an intervention system that aligned closely to STAR (i.e. interventions were based on skill deficit areas as identified via STAR). Most teams seemed very pleased with their Math Assessments, while most of them think their ELA Assessments weren't that great. $4^{\text {th }}$ and $5^{\text {th }}$ grade teachers are weary of using STAR as their SLO as their data did not look good.

- Critical Questions
- What adjustments need to be made to pre/post-assessments to mirror instruction? How much time do teachers need to make these adjustments? What kind of training do they need?
- Will teachers feel more confident during their second year of using STAR?
- Graphic Representation of Data
- Not Available

## Meridian CUSDDM

## SPECIAL EDUCATION

- What is Being Measured

Students identified to receive special education services should have the opportunity to be educated with non-disabled peers to the greatest extent appropriate.

- How is it Measured

The minutes provided in a student's IEP are the minutes of additional support a student must be given to support their academic goals. The goal of special education is to have students in the least restrictive environment as possible. The target is to provide students the opportunities in regular education classrooms as much as possible.

- General Reaction

The percentage of time spent special education students spend in regular education classes has decreased this past year. Several of our special education students are significantly below grade level, thus they have increase minutes in the special education classroom. Also, due to a reduction in the Special Education Department, push-in services were no longer possible. This caused special education minutes to rise. You'll notice a decrease in our code 1 percentage and an increase in our code 2.

- Critical Questions
- Is there a way to facilitate push-in services again?
- Does an examination of curriculum within the instructional classes needs to be done to ensure student needs are being met?
- Graphic Representation of Data
- Please see next sheet

|  | 2015-2016 | 2016-2017 |
| :---: | :---: | :---: |
| Initial | 6 | 7 |
| Re-Evaluations | 16 | 15 |
| Dismissals | 3 | 1 |
| Not Eligible(Initials) | 2 | 1 |
| Move-ins | Unavailable | 5 |

During the 2015-2016 school year, the special education department decreased by one teacher. This impacted our numbers because teachers were no longer able to push in to classrooms (specifically in $3^{\text {rd }}$ grade). This decreased the number of students who were in the regular classroom $80 \%$ or more of their day. This also increased the number of students who were in the regular classroom 40-79\% of their day.

SIP REVIEW 2016-2017

- What is Being Measured

School wide goals are set to by administrators and teachers to improve student achievement. Areas of growth are determined by looking at achievement data and standards students are expected to meet.

- How is it Measured

By the end of 2016-2017 school year, 75\% of Monroe Center students will meet their individual goals in STAR and ELA Pre/Post assessments.

Our current reality at MC is that $63 \%$ of the students met part of the goal. Although teachers were directed to set a goal for the ELA pre/post assessment, not all of them did. Because not of them set a goal, our SIP team was unable to track that portion of the goal.

- General Reaction

As mentioned above, $63 \%$ of MC students met their individual STAR reading goal. With this being a new assessment used in the District, I wasn't entirely sure what to expect for results. It's disappointing that only $63 \%$ of the students met their goals. It's also disappointing that although the teachers were told to create individual pre/post assessment goals, only about half of them followed through. I will ask for all goals to be submitted to me in September of the 2017-2018 school year. This way I will know that a goal was written.

- Critical Questions/Observations
- What can we do for our upper level students? It appears that they aren't reaching their set goal. How can we push/enrich this sect of students?
- Students who were reading above grade level at the beginning of the year but didn't grow by one full year (i.e. A $4^{\text {th }}$ grade student was reading at the $8^{\text {th }}$ grade level in the Fall was only reading at the $8^{\text {th }}$ grade 4th month in May.) weren't counted as meeting the goal. Is this the best way to count that student? What should the expected growth for these students be?
- What could teachers do to increase student achievement in the area of reading?
- Graphic Representation of Data
- Please see next sheet

|  |  |  |  |  |  |

## BUDGET

- What is Being Measured

The amount of money spent at MC during the 2016-17 school year.

- How is it Measured

The process followed at MC for purchases was that each teacher was allotted $\$ 50$ to spend. Teachers were to submit their orders to the secretary, and she would place the order.

- General Reaction

Money spent at MC during the 2016-2017 school year was mainly student related. Money spent during this school year was about $\$ 2,694.83$ more than the 2015-2016 school year. Of the $\$ 2,694.83, \$ 1483.00$ was spent of books for students for the summer. ALL students at Monroe Center were able to choose a book of their choice to take home and read for the summer. As mentioned in my report last year, I also spent money out of the budget to purchase new musical instruments. We also purchases supplementary materials for teachers for Journeys.

- Critical Questions
- How could we be more creative with our funds?
- How can we use the community to support large purchases?
- Graphic Representation of Data
- Please see next sheet

## Meridian CUSDDM3

| Teacher Orders | $\$ 2,307.01$ |
| :--- | ---: |
| Supplies (offices) | $\$ 1,906.02$ |
| Curriculum Resources | $\$ 356.42$ |
| Books for Summer | $\$ 1,483.00$ |
|  | $\$ 6,052.45$ |
| Total Spent ('16-'17) |  |
|  | $\$ 19,726.98$ |
| Total Started w/ |  |
|  | $\$ 13,674.53$ |
| Amount Remaining |  |

## Meridian CUSDDM

## BUILDING SUBSTITUTE USAGE

- What is Being Measured

AESOP is a program used for teachers to request a substitute for a day or an extended period of time. This program is used for all types of absences inclusive of sick, personal, or professional days. Teachers may request a substitute, pre-arrange a substitute by making a personal contact ahead of time with a person, or randomly be assigned a substitute from the system.

- How is it Measured

Substitute usage has been tracked by sick, personal, and professional days. Teachers may use a half day or a full day.

- General Reaction

All teachers are granted two professional development days per year per their teacher contract. The new incentive of matching unused sick days that started during 2014-15 school year did not seem to make a difference in days used. More days were used this year than last year.

- Critical Questions
- How has the attendance incentive of matching unused sick days affected the amount of days teachers took this year compared to years past?
- Graphic Representation of Data
- Please see next sheet

## Meridian CUSDDM

## COUNSELING DEPARTMENT

- What is Being Measured

The counseling minutes at MC were tracked by the time spent intervening with students as individuals, groups, and families. Based on the needs of the students, the focus was on mental health and behavioral concerns, along with meeting academic needs, and future college and career goals.

- How is it Measured

Beginning August 2014, the school counselor tracked students contact time based on direct service, parent contact, staff/agency contact, and classroom lessons, assemblies, classroom goals, etc.

- General Reaction

The counselor spends a lot of time on crisis situations with high needs students. She also helped by handling and minimizing student conflict and being proactive in supporting students in the classroom and emotionally. She also served as a liaison to the principal in regards to investigating incidents.

- Critical Questions
- Ms. Haugh pushed into two different classrooms. I would like to see the data that she gathered from that separated out for 2017-2018. How will we determine if that time spent in the classroom is effective?
- How are the minute meetings reflected?
- Graphic Representation of Data
- Please see next sheet

## RESPONSE TO INTERVENTION

- What is Being Measured

Students not making adequate progress in the regular classroom are provided with increasingly intensive instruction matched to their needs. During the 2016-2017 school year, identified students worked with interventionists/teaching assistants or the Title 1 teacher.

- How it is Measured

Students were progressed monitored using STAR 630, classroom grades, and retake scores.

- General Reaction

Students were identified by looking at the fall benchmark of STAR 360 testing. Teachers were also allowed to refer students to the interventionists if students were struggling in the classroom. While many students showed growth, they are still below the target goal set.

- Critical Questions
- Could the Title program be more effective it there were fewer students in it?
- Are the interventionists/teaching assistants meeting the needs of our students?
- How are we supporting the students who are showing minimal growth?
- Interventions were a lot more fluid this year; however, we still have work to do in regards to identifying students' needs and moving them in and out of interventions.
- Should more students be serviced for less time?
- Are $5^{\text {th }}$ grade's Reading Intervention students not making the same amount of growth due to the fact that most teachers at $5^{\text {th }}$ grade weren't using interventions focused on deficit areas identified by STAR?
- Upon reviewing the Reading Intervention SGP data, I was expecting my Math students to have done better due to the fact that we have a Math Interventionist; however, they weren't as good. Once I compared it to the whole school overall and to SPED, they are making higher growth than both of those areas.
- What can we do to reach our students who need enrichment? Enrichment interventionist? Enrichment time?
- Graphic Representation of Data - Please see next sheet

Meridian CUSD \#223 2017-2018 Data Report

Meridian Junior High

Board of Education:
Throughout the 2016-2017 school year, I performed a close read and analysis of accessible and applicable information to consistently understand the contextual situation of Meridian Junior High School. I will continue to complete thorough write-ups of the information in order to share my findings with the Board of Education, Superintendent, District Leadership Team, and building staff to ensure total transparency in communication.

## Comprehensive Data Examination

My intent is to provide the District Office and Board of Education a solid understanding of Meridian Junior High School's performance as measured by several indicators over the past several years. When data are available, and it is appropriate, I have compared our performance to that of other schools in our area to provide additional contextual understanding.

For each group of data presented, I will include:

- Explanation of what is being measured
- How it is being measured
- General reaction to the data
- Critical questions about the subject that should be considered moving forward
- A graphic (if possible)

## Meridian CUSDD23

## ATTENDANCE

- What is Being Measured

The percentage of students who attend Meridian Junior High School on a daily basis is the focus of this measurement. The information is reported to the state of Illinois through our Student Information System (SIS) and then displayed on the Illinois Interactive Report Card. The data is used to as comparison data to other schools and as a fiscal component from the state.

- How is it Measured

Student attendance is reported and measured through the SIS (Skyward). The data is submitted to the state of Illinois at the conclusion of each school year.

- General Reaction

The attendance rate for the 16-17 school year increased slightly from previous years, although still comparable to surrounding districts. This past year 11 students were referred to truancy, down slightly from 13 last year. Of these 11, 4 were free and reduced lunch students. A new truant officer was assigned to Meridian 223 this year. Even though 11 one time referrals were given, she only met with 2 students face to face.

- Critical Questions
- Is there a population of students who are continually absent?
- What are we doing to support and follow up with chronically absent students of 10+ days?
- How do we educate or connect with the parents of truant students?
- What is the role of the truant officer after the initial referral is given?
- Is the attendance policy of 10 excused days impacting overall attendance?
- Could an attendance incentive improve our overall attendance rate?
- Is there a way to contact doctors regarding blanket attendance letters given for missed school days over time?
- Graphic Representation of Data
- Please see next sheet

## DISCIPLINE

- What is Being Measured

The percent of discipline cases both minor and major based on the Positive Behavior Intervention and Support (PBIS) system. Minor discipline data is used locally and major discipline cases are reported to the state.

- How is it Measured

Students receive minors or majors depending on the offense and are tracked using an electronic document shared by staff members. Minors are handled by teachers until a student receives a fourth minor in a quarter at which time it becomes a major. Minors result in a conference with the student, a parent contact, and/or an after school detention. Majors are handled by the administrator typically resulting in a Saturday School, an inschool suspension, or an out-of-school suspension. Discipline data collected is used for school wide goal setting and quarterly celebrations.

- General Reaction

For the third year in a row, the number of minors has decreased. During the 16-17 school year 51 fewer minors were issued. This is an interesting result since teachers were allowed to give minors for being unprepared for class for chronic students. Some of the decrease in minors could be attributed to the change in detention practices. All detentions that were issued for 3 minors were served in the office after school for an hour.

- Critical Questions
- How can we better support our students who have 3 minors within a quarter?
- What can we do to support our at risk students?
- Graphic Representation of Data
- Please see next sheet

| 6th | 92 |
| 7th | 126 |
| 8th | 133 |

## Meridian CUSDDM

## Disaggregated Student Discipline Data

The chart shows the students with the most minors during second semester of school year 2016-2017 separated by \# of minors, low socio-economic status, attendance, and standardized test scores.

| Student | \# of <br> Minors | Low SES | Attendance | Parcc |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Math | Reading |  |
| $\mathbf{1}$ | 8 | Yes | 4 | B | M |
| $\mathbf{2}$ | 8 | Yes | 4 | B | B |
| $\mathbf{3}$ | 7 | No | 13 | B | B |
| $\mathbf{4}$ | 5 | No | 2 | B | B |
| $\mathbf{5}$ | 5 | No | 16 | B | B |
| $\mathbf{6}$ | 4 | Yes | 11 | B | B |
| $\mathbf{7}$ | 4 | Yes | 16 | B | B |
| $\mathbf{8}$ | 4 | Yes | 21 | B | B |

- $62 \%$ of the students with the most minors are low SES
- $25 \%$ of the students were referred to the truancy officer
- $25 \%$ of the students have a special education eligibility
- 0\% of the students meet in both reading and math on the Parcc Exam
- $12 \%$ of the students meet in one area on the Parcc Exam
- $88 \%$ of the students approached expectations, partially approached expectations or did not meet expectations on the Parcc Exam

## Meridian CUSDD23

## TEACHER EVALUATION

- What is Being Measured

Teacher performance in the classroom is evaluated using Charlotte Danielson's Framework for Teaching. They are evaluated in four domains; Planning and Preparation, The Classroom Environment, Instruction, and Professional Responsibilities, with 22 components altogether. Non-tenured teachers are formally evaluated twice per year and tenured teachers are formally evaluated once every other year. All teachers are also evaluated informally throughout the year.

- How is it Measured

In the Framework for Teaching, teachers can be rated excellent, proficient, needs improvement, or unsatisfactory. Based on the Certified Staff Evaluation Plan with the SVEA, teachers need 13 or more components rated excellent with none others below proficient in order to be rated excellent, no more than 3 components rated needs improvement with none unsatisfactory in order to be rated proficient, 4 or more components rated needs improvement with none unsatisfactory in order to be rated needs improvement, and at least one component rated unsatisfactory in order to be rated unsatisfactory.

- General Reaction

During the 2016-2017 school year 14 teachers were evaluated. Of these 14 teachers, 7 were non-tenured. One teacher resigned after being rated unsatisfactory. When compared to other building, MJHS has a higher number of needs improvement ratings.

- Critical Questions
- How can a teacher be supported when rating falls below a proficient status?
- What strategies can be used to help teachers in questioning and discussion techniques?
- What can we do to improve inter-rater reliability among administrators?
- How can staff be supported to understand that a rating of proficient or needs improvement in an individual component is an area for growth and does not have a negative stigma?
- Graphic Representation of Data
- Please see next sheet

## Merilian CUSDDM

## Meridian CUSDDM3

## Star

- What is Being Measured

The STAR tests are computer-adaptive tests given at least 3 times a year in the areas of math and reading. STAR Math is an assessment that tracks development in these four domains: numbers and operations, algebra, geometry and measurement, and data analysis, statistics, and probability. STAR Reading is an assessment of reading comprehension and skills for independent readers. STAR Reading tracks development in these five domains: word knowledge and skills, comprehension strategies and constructing meaning, analyzing literary text, understanding author's craft and analyzing argument and evaluating text.

- How is It Measured

The STAR assessments continually adjust the difficulty of a student's test by choosing a test question based on the child's previous response. If a student answers correctly, the difficulty of the next item is increased. If a student misses a question, the difficulty level is decreased. Every student receives a scaled score which is based on the difficulty of the questions and the number of correct answers. Scaled scores are useful for comparing a student's performance over time and across grades. A scaled score ranges from 0-1400. The Student Growth Percentile, or SGP, compares a student's growth to that of his or her peers nationwide. SGP scores are reported on a 1-99 scale. SGP's are important to examine because even though a student may be performing at a low level, they may be experiencing high rates of growth. Conversely, a high performing student can be stagnating.

- General Reaction

Growth in Math and Reading was similar across Math and Reading in $6^{\text {th }}$ and $7^{\text {th }}$ grade. $8^{\text {th }}$ grade math is an area of concern.

- Critical Questions
- How can we incentivize STAR testing? Or should we?
- Do we teach students to not "guess"?
- How can the special education co-teaching situations be improved?
- How can we better utilize STAR reports to enhance instruction?
- How do we increase parent knowledge surrounding STAR?
- Graphic Representation of Data
- Please see next sheet

NON - LOCAL ASSESSMENT (PARCC)

- What is Being Measured

The partnership for Assessment of Readiness for College and Career (PARCC) tests were designed to measure performance against a higher set of standards. The tests go beyond multiple choice questions and require students to use skills like analyzing, problem solving, and writing effectively. All of these skills are necessary in order for students to be successful post high school. Middle school students are tested in the area of English Language Arts (ELA) and Math.

- English Language Arts assessments will demonstrate:
- Whether students can read and comprehend texts of varying complexities.
- How well students an integrate information across sources to make a persuasive argument.
- The degree to which students can use context to determine the meaning of academic vocabulary.
- Math assessments will demonstrate:
- Whether students understand and can use important math ideas, including number sense, algebraic thinking, geometry, and data analysis.
- The extent to which students can use math facts and reasoning skills to solve real-world problems.
- How well students can make math arguments
- How is it Measured

Students are given an overall numeric score out of 850 on both the ELA and Math assessments. Students are given a Performance Level based on numeric scores.

These Performance Levels include:

- 650-700 Level 1- Did Not Meet Expectations
- 700-725 Level 2- Partially Met Expectations
- 725-750 Level 3- Approached Expectations
- 750-803 Level 4- Met Expectations
- 803-850 Level 5-Exceeded Expectations
- General Reaction

NON - LOCAL ASSESSMENT (ACCESS)

- What is Being Measured

ACCESS is a standard's based criterion referenced English language proficiency test designed to measure English language learners social and academic proficiency in English. It assesses social and instructional English as well as the language associated with language arts, mathematics, science, and social studies within the school context. It is a universal screener given to students $\mathrm{K}-12$ who are identified as English language learners.

## - How is it Measured

ACCESS was used during the 2016-2017 school year by the ELL teacher in early February to assess ELL student's proficiency levels of English in areas of listening, speaking, reading, and writing with these students. In January 2014, new proficiency levels were implemented. Students who obtain an overall composite proficiency level of 5.0 as well as a reading proficiency level of 4.2 and a writing proficiency level of 4.2 on this annually administered test are considered to be English language proficient. Below is the breakdown of how the ACCESS test is scored.

- General Reaction

The 2017 Access data was below average. During the 2016-2017 school year, of the seven students tested zero met the proficiency requirements. Students who met proficiency during the 2016 testing session, more than likely would not have exited under these new proficiency standards.

From WIDA: To meet language demands of college- and career-ready state standards, WIDA is raising the bar for language proficiency. Students will need to demonstrate higher language skills in 2016-2017 to achieve the same proficiency level scores (1.0-6.0). The changes in ACCESS for ELLs 2.0 scores in 2017 are expected to impact students in the following ways: some students' scores may go down and fewer students may exit program support.

## - Critical Questions

- How can we support the ELL students in writing proficiency?
- Why did the extra interventions given to $6^{\text {th }}$ grade EL students in reading seem to have no impact?
(Would like to add STAR data to table)

- Graphic Representation of Data
- Please see below

# Meridian CISDDM 

## ACADEMIC PERFORMANCE OF LOW SOCIO-ECOMONIC STATUS

- What is Being Measured

Low SES is a measure of a family's income in comparison to the total size of their family. This is measured primarily to ensure that schools are in compliance with the federal law regarding free and reduced lunch prices for students who are labeled through the process as having Low Socio-Economic Status. Additionally, schools look at this data frequently because students with Low SES often have different subsets of strengths and potential issues. When looking at academic data over time, most low SES students usually underachieve in comparison to non-low SES students.

- How is it Measured

Low SES is measured by federal guidelines measuring family size compared to family income. The breakdown of the guidelines for the 16-17 school year is listed below.

185\% Federal Poverty Guidelines

| Household Size | Annual | Monthly | Twice Per Month | Every Two Weeks |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 21,978 | 1,832 | 916 | 846 |  |
| 2 | 29,637 | 2,470 | 1,235 | 1,140 |  |
| 3 | 37,296 | 3,108 | 1,554 | 1,435 |  |
| 4 | 44,955 | 3,747 | 1,874 | 570 |  |
| 5 | 52,614 | 4,385 | 2,193 | 2,024 |  |
| 6 | 60,273 | 5,023 | 2,512 | 8 |  |
| 7 | 67,951 | 5,663 | 2,832 | 2,319 |  |
| 8 | 75,647 | 6,304 | 3,152 | 1,012 |  |
| For each additional <br> family member, add | 7,696 | 642 | 2,914 |  |  |

- General Reaction

The Low SES population decreased slightly during the 2016-2017 school year. Of the 121 low income students, 101 received free lunch, and 12 paid a reduced price.

- Critical Questions
- Should this population be main goal of the math interventionists next year?
- Is the Counselor targeting these families with free supplies, Holiday Hope Chest, etc.?
- Are we communicating and/or referring enough families for additional services?

## LOCAL ASSESSMENT

- What is Being Measured

The Performance Evaluation Reform Act (PERA) and SB7 states evaluations must use data and indicators of student growth as a significant factor in rating teacher performance. For this purpose starting in 2016-17, thirty percent of a teacher's evaluation must represent student growth by collecting multiple data points for each student over time. Teachers must choose 2 different types of tests such as a nationally normed, local to district, or specific to a course to use for the student growth portion of the overall evaluation rating.

- How is it Measured

Full implementation for PERA started during the 16-17 school year. Teachers administered mirrored assessments at the beginning at end of the school year. After the pretests were given student learning objectives (SLOs) were created for each student. Teachers were able to use historical data from last year's no stake year to help determine their SLO's. Teachers did a mid-point check to monitor instructional progress. Teachers had the opportunity to adjust their SLO at this time. After post-assessments were given, teachers determined how many students met their individual learning goals.

- General Reaction

During the 16-17 school year teachers used teacher created summative growth assessments. During individual meetings with teachers, many expressed minor adjustments they were going to make to their assessments for next year. Only the $8^{\text {th }}$ grade math teacher was rewriting all of her assessments. The English Department used a rubric. They found difficulty with grading the post writing sample.

- Critical Questions
- What adjustments need to be made to pre/post-assessments to mirror instruction?
- What adjustments need to be made based on student performance?
- How will the student performance modify or enhance instruction in the classroom?
- Will Math and Literature use STAR next year after one year of implementation?
- Graphic Representation of Data
- Not Available

## SPECIAL EDUCATION

- What is Being Measured

Students identified to receive special education services should have the opportunity to be educated with non-disabled peers to the greatest extent appropriate.

- How is it Measured

The minutes provided in a student's IEP are the minutes of additional support a student must be given to support their academic goals. The goal of special education is to have students in the least restrictive environment as possible. The target is to provide students the opportunities in regular education classrooms as much as possible.

- General Reaction

We continue to look at ways to support more students in the general education setting. Four paras were utilized to support students mainly in the regular education classroom.

- Critical Questions
- How are paraprofessionals being used to support these students in the regular education classroom?
- What training needs to be done for the paraprofessionals to best meet the needs of the students?
- Does an examination of curriculum within the instructional classes needs to be done to ensure student needs are being met?
- Are we offering too much support as a student transitions from MC?

O How do measure the use and impact of a para in a regular education class?

- Graphic Representation of Data
- Please see next sheet

| Special Education Evaluations 2016-2017 |  |
| :---: | :---: |
| Initial IEP's | 1 |
| Re-Evaluations | 15 |
| Dismissals | 2 |
| Not Eligible | 0 |

## SIP REVIEW

- What is Being Measured

School wide goals are set to by administrators and teachers to improve student achievement. Areas of growth are determined by looking at achievement data and standards students are expected to meet.

- How is it Measured

The SIP goal for 2015-17 is for student's writing scores to increase by $10 \%$ or more when averaged across disciplines. This was modified and now includes a short response rubric and color coded writing response procedure that has been used across grade levels and content areas.

- General Reaction

In the famous words of Dr. Caposey "what gets monitored gets done". This goal was lofty and has been modified as we worked through how to improve writing. All content areas have used a writing sample and the short response rubric with various colleagues for inter-rater reliability. The short response rubric is being used consistently throughout $6^{\text {th }}$ grade. The other teachers are using it, but not as consistently as intended. When meeting with the English teachers regarding their SLOs, they report growth in writing because of the other content areas using the short response rubric and same vernacular.

## - Critical Questions

- How can professional development continue to support the writing initiative?
- How can teachers who are not typically writing teachers be supported and empowered to use writing stems related to their instruction to get measurable outcomes?
- Graphic Representation of Data
- Please see next page

## Meridian CISDDM3

SMART Goal Action Plan
School - Meridian Jr. High
Year: 2015-2017
SIP Goal 1: Over the next two school years (2015-2017) a student's score on the MJHS Common Writing Rubric will increase by $10 \%$ or more when averaged across disciplines.

| SIP | Specific Activities and Action steps | Who is Responsible? | Target Dates and Timelines | Deliverables | Evidence of Effectiveness |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Current Reality: <br> During the 2012 school year when writing was assessed on the ISAT only 19\% of students scored a 3 or higher. <br> The 2015 ACCESS <br> scores showed no growth or proficiency in the area of writing. | Data Presentation | Admin | August, 2015 | Brainstorm list of critical skills | List of skills generated after looking at writing scores/started conversations |
|  | Introduce English Rubric to Staff | English Dept | August, 2015 | Identify critical skills for content areas | Gave identifiable skills to each content area to look at/rubric way too complicated for other content areas |
| SMART Goal: <br> Over the next two school years (20152017) a student's score on the MJHS Common Writing Rubric will increase by $10 \%$ or more when averaged across disciplines. | PLC's meet to determine content area needs | $\begin{gathered} \hline \text { PLC } \\ \text { Teams } \end{gathered}$ | Sept, 2015 | Google Doc to Admin | Was effective for certain teams |
|  | Team meetings to determine crucial skills for content area rubric | Teacher Leaders | October, 2015 | Google Doc to Admin | Eased anxiety after seeing skills were common across content areas |
|  | First Draft of Content Area Rubric | Teacher Leaders/Admin | $\begin{gathered} \hline \text { December, } \\ 2015 \end{gathered}$ | First Draft of Rubric | Amended step \& created rubric for each content area based on identified skills |
|  | First Draft taken back to PLC's | PLC Teams | January, 2016 | Google Doc to Admin | Not effective/staff overwhelmed with student growth data |
|  | Draft \#2 of Rubric | Teacher Leaders/Admin | March, 2016 | Final Draft of Rubric | Met with SIP Team/Amending rubric |
|  | Development of Short Answer Response Rubric | Teacher <br> Leaders | April, 2016 | Short Response Rubric | Seems to have been well received; have evaluated several writing samples from science who used it |

|  | Analyze Parcc writing data | PLCs | Aug-Sept 2016 | Admin created form | No Detailed Report to Use |
|  | Review Short Response Rubric | Aimee Stewart/Admin | August, 2016 | Student examples to grade |  |
|  | Inclusion of short response rubric onto all graded assignments | All Teachers | Ongoing | Observations | This has been observed in all content areas, including electives |
|  | Short response data collected for students across teachers | All Teachers | Completed by October 31, 2016 | Teacher Leader Created Data collection form | ***Changed action steps. Began to use color coding writing response**** |

## BUDGET

- What is Being Measured

The amount of money spent at MJHS during the 2016-17 school year.

- How is it Measured

The process followed at MJHS for purchases included preapproval from administration based on rationale of need and tracking of purchase orders by office staff. All purchases were to focus on supporting students and achievement.

- General Reaction

During the 2016-2017 school year was spent. The staff continues to be

| Literature | 145.00 |
| :--- | ---: | The science and art departments were able to purchase supplies as needed.

approximately $37 \%$ of the building budget resourceful with their use of supplies.

- Critical Questions
- How are we going to continue meeting the curricular needs of students when funds are limited?
- How can we use the community to support large purchases?
- Can we learn more about applying for grants, scholarships, etc.?
- Is there a textbook rotation?
- Graphic Representation of Data
- Please see next sheet

## BUILDING SUBSTITUTE USAGE

- Whatis Being Measured

Sub Finder is a program used for teachers to request a substitute for a day or an extended period of time. This program is used for all types of absences inclusive of sick, personal, or professional days. Teachers may request a substitute, pre-arrange a substitute by making a personal contact ahead of time with a person, or randomly be assigned a substitute from the system.

- How is it Measured

Substitute usage has been tracked by sick, personal, and professional days. Teachers may use a half day or a full day.

- General Reaction

The number of sick days used during the 2016-2017 school year increased by 2 over last year. The substitutes we used at MJHS were very loyal and flexible. Teachers were more diligent with contacting substitutes directly to set them up ahead of personal days.

- Critical Questions
- How has the attendance incentive of matching unused sick days affected the amount of days teachers took this year compared to years past?
- Graphic Representation of Data
- Please see next sheet

$\square$ Personal days used - 10

# Meridian CISDDM 

## COUNSELING DEPARTMENT

- What is Being Measured

The counseling minutes at MJHS were tracked by the time spent intervening with students as individuals, groups, and families. Based on the needs of the students, the focus was on mental health and behavioral concerns, along with meeting academic needs, and future college and career goals.

- How is it Measured

Beginning January 2015, the school counselor tracked students contact time based on crisis interventions, individual crisis, group interventions, classroom presentations, before school study hall, classroom/student observations, lunch supervision, etc.

- General Reaction

The counselor spends a lot of time on crisis situations with high needs students whom often are found in the special education classroom. She also is the first line of defense when handling and minimizing student conflict and being proactive in supporting students in the classroom and emotionally. During the 17-18 school year she will be running more groups and completing more lessons during common study halls.

- Critical Questions
- How can the counselor better support families that continuously contact her?
- How do we better meet the needs of special education students using our school social worker and psychologist?
- How do we share counseling resource information more effectively with parents to help with support at home?
- Graphic Representation of Data
- Please see next sheet

|  | August | September | October | November | December | January | February | March | April | May |

## RESPONSE TO INTERVENTION

- What is Being Measured

Students not making adequate progress in the regular classroom are provided with increasingly intensive instruction matched to their needs. During the 2016-2017 school year, identified students worked with two interventionists in the areas of reading and/or math.

- How it is Measured

Students were progressed monitored using STAR Math, STAR Reading, classroom grades, and retake scores.

- General Reaction

The math interventionist tried a few different approaches to interventions this year. The first groups she worked with focused on students that were higher performing, but lacking a few specific skills according to STAR math. These groups saw a jump in SGP after they were serviced by the interventionist. But, after the winter benchmark was given, they were slowly declining in growth.

- Critical Questions
- Are the interventionists meeting the needs of our students?
- How are we supporting the students who are showing minimal growth?
- What is our growth goal? Should we focus on reaching 50 SGP?
- Should the interventionist role be more fluid? Should more students be serviced for less time?
- If the students are not seeing success with the intervention in place are they then referred to SAT?
- How can the interventionists be maximized during the common study halls next year?
- Graphic Representation of Data
- Please see next sheet

## Meridian CISDDM3

MATH INTERVENTION

| Student Name | Gr. Level | SS-Fall | Catch-up Goal | 10/24 SS post intervention | Change in score | SS-Winter |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Student 1 | 6th | 755 | 774 | 782 | 27 | 780 |
| Student 2 | 6th | 751 | 772 | 742 | -9 | 778 |
| Student 3 | 6th | 757 | 776 | 779 | 22 | 769 |
| Student 4 | 6th | 755 | 774 | 759 | 4 | 820 |
| Student 5 | 6th | 753 | 772 | 785 | 32 | 727 |
| Student 6 | 6th | 739 | 762 | 818 | 79 | 824 |
| Student 7 | 6th | 738 | 762 | 845 | 107 | 846 |
| Student 8 | 6th | 752 | 773 | 783 | 31 | 827 |
| Student 9 | 6th | 714 | 739 | 785 | 71 | 774 |
| Student 10 | 6th | 718 | 746 | 735 | 17 | 698 |
| Student 11 | 6th | 727 | 753 | 692 | -35 | 689 |
| Student 12 | 6th | 725 | 751 | 842 | 67 | 719 |
| Student 13 | 6th | 758 | 777 | 775 | 17 | 728 |

This data is related to the first group served by the interventionist. This group represents students were predicted to be able to meet expectations on the PARCC with some additional support. The progress monitoring that was done at the end of the intervention time resulted in all but 2 students reaching their goal. These students were examined, again, after the winter benchmark. 8 students were no longer at their catch up goal. It can be concluded that students scored well originally because the interventionist was pre-teaching skills that the students had not been exposed to yet in the classroom.

## Meridian CISDDM

Board of Education:
Throughout the 2016-2017 school year I performed a close read and analysis of accessible and applicable information to consistently understand the contextual situation of Stillman Valley High School. I will continue to complete thorough write-ups of the information in order to share my findings with the Board of Education, Superintendent, District Leadershiprrr Team, and SVHS Faculty \& Staff to ensure total transparency in communication.

## Comprehensive Data Examination

My intent is to provide the District Office and the Board of Education a solid understanding of Stillman Valley High School's performance as measured by several indicators over the past several years. When data are available, and it is appropriate, I have compared our performance to that of other schools in our area to provide additional contextual understanding.

For each group of data presented, I will include:

- Explanation of what is being measured
- How it is being measured
- General reaction to the data
- Critical questions about the subject that should be considered moving forward
- A graphic (if possible)

## Meridian CUSDMA

## ACT COLLEGE READINESS BENCHMARKS

- What is Being Measured

ACT, Inc. has attempted to answer the question, "What does a student need to score on each subsection of the ACT to have greater than $50 \%$ percent likelihood to be successful in content area courses of that nature in college?"

- How is it Measured

ACT, Inc. has backwards engineered these benchmark scores. Since so many college students have taken the ACT for college entrance, ACT has been able to track students that have been successful in their entry-level courses and then attach the ACT score they achieved while in high school. This leads to each subsection having one score, which becomes the College Readiness Benchmark (CRB). The benchmarks are as follows:

```
- English-18
- Math-22
- Reading-22
- Science-23
```

## - General Reaction

Beginning with the 2015-2016 school year in Illinois, the ACT - a critical requirement for getting into most colleges and given free to high school juniors - became optional and unfunded by the State for the first time in nearly 15 years. This component of the data analysis will continue to be included, but the data will only represent the students in the junior class that elect to take the ACT on their own each year since it is no longer free and required by the state. The 2016-2017 school year was the first year of the new Illinois required SAT exam for all juniors. Neither the ACT nor the SAT was provided by the state in 2015-2016, so only $55 \%$ of our Class of 2017 took the ACT on their own. Currently, only five percent of the Class of 2018 has taken the ACT.

- Critical Questions
- 

How will this year's SAT assessment data compare to past ACT
CRBs?

LOW SOCIOECONOMIC STATUS (SES)

- What is Being Measured

Low SES is a measure of a family's income in comparison to the total size of their family. This is measured primarily to ensure that schools are in compliance with the federal law regarding free and reduced lunch prices for students who are labeled through the process as having Low Socio-Economic Status. Additionally, schools look at this data frequently, because students with low SES often have different subsets of strengths and potential issues. Another reason to track these numbers is that a large amount of research has been conducted indicating that as Low SES numbers rise in a school or district, student achievement should drop - hence, they are inversely correlational.

- How is it Measured

Low SES is measured by federal guidelines measuring family size compared to family income. The breakdown of the guidelines for the 16-17 school year is listed below.

FISCAL YEAR 2017 INCOME ELIGIBILITY GUIDELINES
The United States Department of Agriculture has issued the following income guidelines for the period July 1, 2016, through June 30, 2017:

Income Eligibiltiy Guidelines
Effective from July 1, 2016 to June 30, 2017

|  | Free Meals 130\% Federal Poverty Guideline |  |  |  |  |  | Reduced-Price Meals 185\% Federal Poverty Guideline |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Household Size | Annual | Monthly | Twice Per Month | Every Two Weeks | Weekly | Household Size | Annual | Monthly | Twice Per Month | Every Two Weeks | Weekly |
| 1 | 15,444 | 1,287 | 644 | 594 | 297 | 1 | 21,978 | 1,832 | 916 | 846 | 423 |
| 2 | 20,826 | 1,736 | 868 | 801 | 401 | 2 | 29,637 | 2,470 | 1,235 | 1,140 | 570 |
| 3 | 26,208 | 2,184 | 1,092 | 1,008 | 504 | 3 | 37,296 | 3,108 | 1,554 | 1,435 | 718 |
| 4 | 31,590 | 2,633 | 1,317 | 1,215 | 608 | 4 | 44,955 | 3,747 | 1,874 | 1,730 | 865 |
| 5 | 36,972 | 3,081 | 1,541 | 1,422 | 711 | 5 | 52,614 | 4,385 | 2,193 | 2,024 | 1,012 |
| 6 | 42,354 | 3,530 | 1,765 | 1,629 | 815 | 6 | 60,273 | 5,023 | 2,512 | 2,319 | 1,160 |
| 7 | 47,749 | 3,980 | 1,990 | 1,837 | 919 | 7 | 67,951 | 5,663 | 2,832 | 2,614 | 1,307 |
| 8 | 53,157 | 4,430 | 2,215 | 2,045 | 1,023 | 8 | 75,647 | 6,304 | 3,152 | 2,910 | 1,455 |
| For each additional family member, add | 5,408 | 451 | 226 | 208 | 104 | For each additional family member, add | 7,696 | 642 | 321 | 296 | 148 |

- General Reaction

The demographic of our school and of our supporting communities is changing. With the number of students receiving Free and Reduced Lunch rising, so too have academic achievement scores - therefore defying the inversely correlational relationship the national data suggests. This is to be commended. Additionally, the comparison of SVHS to other schools over time allows for a quick, albeit incomplete view of what neighboring districts are dealing with.

- Critical Questions
- What are we doing to support the varying needs of students coming from a low SES background?
- Is our decrease these past two years attributed to an improvement in our local/state/federal economy?
- We cannot change the economic status of our families. How do we tailor their school experiences to best support them?
- Graphic Representation of Data
- Please see next page

# Meridian CISDDM3 

## STUDENT ATTENDANCE PERCENTAGE

- What is Being Measured

The percentage of students who attend Stillman Valley High School on a daily basis is the focus of this measurement. This information is reported to the state of Illinois through our Student Information System (SIS) and then displayed on the Illinois Interactive Report Card, thus allowing comparison data to other schools to be collected. As we all know, student attendance is a major factor in determining levels of state funding, so there is a fiscal component to the importance of attendance, not simply an academic impact.

- How is it Measured

Student attendance is measured through SIS \& Skyward, and we report the data to the state of Illinois at the conclusion of each school year.

- General Reaction

Our attendance numbers are slightly lower than our neighboring schools, but without further information it is difficult to draw any conclusions. For instance, with attendance, a singular outlier can impact your overall percentage by 0.1 to 0.3 percent. If a particular school has a handful of outliers in a particular year, it may look as though they have a compulsory attendance issue, when in fact the attendance issue rests with how the school could have reported a few individual students.

- Critical Questions
- How can we use our data more effectively? For instance, how many students missed 10+ days of school last year? What did we do for those kids in terms of interventions, academic, social, and emotional support?
- Are we 'routing' kids appropriately to other educational destinations that may be more appropriate for them?
- How can we support our students and families better to encourage improved attendance?
- How will our 2017-2018 Social/Emotional Wellness SIP Goal impact student attendance?
- Graphic Representation of Data
- Please see next page

SVHS Student Attendance Percentage

## GRADUATION RATE PERCENTAGE

- What is Being Measured

The graduation rate is the percentage of students who graduate from Stillman Valley High School four years after a cohort of students entered, divided by the amount of students that entered the cohort. This is a statistical measure that has drawn lots of criticism over the years from administration since it does not take into account student mobility. This caused such conversation that the Federal Government issued a guidance document that is over 30 pages in length (http://www2.ed.gov/policy/elsec/guid/hsgrguidance.pdf). Since 2011 schools have been charged with accounting for mobility with many specific rules. The bottom line is that the system is not perfect, but it has been standardized and meets the test of common sense.

- How is it Measured

Schools self-report for their graduation rate, but the formula is as follows (same since 2011). The number of graduates for a given year DIVIDED by (The number of first time $9^{\text {th }}$ graders in the Fall four years prior, plus students who transfer in, minus students that transfer out, emigrate, or die during the four years following their first enrollment in high school). Students with disabilities that stay in school to the age they are legally permitted to do so, DO count against graduation rate data.

- General Reaction

Our data is climbing and is quite good currently. It is important to recognize if there are certain programs that we can point to that have led to this increase, for instance Nachusa, FLEX Program, etc.

- Critical Questions
- One kid not graduating on time (unless it is the case of disability discussed above) is too many - how are we losing kids? How can we provide more support?
- How can we utilize our School Counselors and staff mentors to meet the needs of these students?
- Has there been a specific, sustainable plan to support the increase in current data?
- How could a greater focus on the social/emotional needs of our students impact the number of students graduating on time?
- Graphic Representation of Data

[^1]
## Maridian CUSDMS

SVHS Graduation Percentage

Graduation Rate 11 Year Avg. (High Achieving)

SVHS BUDGET - FY17

## - What is Being Measured

The amount of money spent at SVHS during the 2016-17 school year.

## - How is it Measured

The process followed at SVHS for purchases included preapproval from administration based on rationale of need and tracking of purchase orders by office staff. All purchases were to focus on supporting students and achievement.

## - General Reaction

Money spent at SVHS this past year was mainly curricular in nature. Most of the money was spent on necessary materials for performance-based courses and/or projects. The faculty and staff were very conscientious about prioritizing purchases and providing a rationale for each purchase to better meet student needs. It is worth noting that partnerships pursued by Mr. Mike Reagan (SVHS A.D.) with our local banks led to significant improvement in our athletic score boards and resources. A partnership with the Exelon Generating Station also made it possible for SVHS to acquire a new portable stage for various school events.

- Critical Questions
- How are we going to continue meeting the curricular needs of students when funds are limited?
- How can we collaborate even more through community partnerships with local organizations to support large purchases?
- Are we seeking opportunities to apply for grants, scholarships, etc.?
- Graphic Representation of Data

## Allocated Department Budgets FY 2017

## Meridian CUSDDM3

## STUDENT ACT PERFORMANCE

- What is Being Measured

In this data report the focus is on student performance on the ACT as measured by their Composite Scores. The Composite Score provides the answer for the traditionally asked question, "What did you get on your ACT?"

- How is it Measured

The school receives the report regarding ACT data in the fall following the class's graduation and this composite average is always higher than the average on testing day. This is because a number of students will choose to retake the ACT to earn a higher score. This composite average only looks at the highest score a student has attained. This second, final number is the one used almost exclusively when state-wide reports and rankings of schools take place.

The ACT Composite Score is created by finding the average of the four subsection scores on the ACT. As discussed earlier in this report, the four subsections are: English, Math, Reading, and Science. When figuring the score, traditional rounding rules apply, anything 5 or above is rounded up, and anything . 4 or below is rounded down.

- General Reaction
- Beginning with the 2015-2016 school year in Illinois, the ACT - a critical requirement for getting into most colleges and given free to high school juniors - became optional and unfunded by the State for the first time in nearly 15 years. This component of the data analysis will continue to be included, but the data will only represent the students in the junior class that elect to take the ACT on their own each year since it is no longer free and required by the state. The 2016-2017 school year was the first year of the new Illinois required SAT exam for all juniors. Neither the ACT nor the SAT was provided by the state in 2015-2016, so only $55 \%$ of our Class of 2017 took the ACT on their own. Currently, only five percent of the Class of 2018 has taken the ACT.

## Meridian CUSDDM3

## SAT PERFORMANCE

- What is Being Measured
- The SAT is based on a 1600-point scale, with two sections-Math and Evidence-Based Reading and Writing-scored between 200 and 800, and the optional essay evaluated separately.
- How is it Measured
- There is no penalty for wrong answers, so your raw score is the sum of the number of questions you answer correctly. Raw scores are converted to scaled scores, which are used to determine percentile ranks. The percentile indicates how well you did compared to other test takers. For example, if you score in the 72 nd percentile, you did better than $72 \%$ of test takers.
- Combined Scores
- 400-1010
- Below Average
- These scores may be enough to get into a wide variety of college programs, but will be below average compared to the testing population.
- 1030-1180
- Above Average
- These scores put you ahead of the pack at $50 \%+$, but won't be as advantageous when applying to highly competitive programs.
- 1200-1320
- Competitive
- These scores will put you in a highly competitive place in admissions - top $25 \%$ of all test takers.
- 1340-1600
- Top Scores
- These scores will put you in the top $10 \%$ of all test takers.
- General Reaction
- Based on Illinois's composite benchmark for the SAT, $45 \%$ of our juniors met or exceeded the state target. However, $55 \%$ of our juniors "met or exceeded" expectations according to the benchmarks established and recognized by College Board. Ultimately, we will use the state's composite benchmark to compare ourselves to local high schools, high schools in Illinois with a similar SES to us, and high achieving high schools across the state.

## Meridian CISDDM3

- Critical Questions
- What can we do to better track the data to determine the success of the SAT prep activities that we are currently weaving into our curriculum and through Khan Academy and ZAPs SAT test prep?
- How can we make sure there is a focus to move all students forward based on their previous data, not just students on the Meets/Exceeds bubble?
- Are our current incentives for this assessment motivating for all of our juniors? How will we create a culture of intrinsic drive and determination for every student regardless of incentives?
- How will SVHS SAT data compare to our neighboring high schools, comparative low SES high schools, and high achieving high schools in Illinois?
- Graphic Representation of Data
- Please see next page.

## ADVANCED PLACEMENT (A.P.) PROGRAM DATA

- What is Being Measured

In this data report the focus is on all components of SVHS's Advanced Placement program. Student enrollment, course offerings, and student performance are all highlighted.

- How is it Measured

Advanced Placement Testing is a division of CollegeBoard, Inc. - the group which also produces the SAT exam. All of the information provided in this report is a synthesis between the data we input to them and the data they provide back to us in July with our annual reports.

- General Reaction

The excellence our students have demonstrated in nearly every other data measurement is not equally reflected in terms of their performance on Advanced Placement tests. However, we did see a positive increase in the overall pass percentage in 2017 with outstanding pass rates in AP Biology and AP U.S. History. AP English, AP Spanish, and AP World History also demonstrated strong student test performance. It is important to note that we do not select or place certain students in our AP Courses. At SVHS we believe that all students have the ability to be successful in an AP Course if they wish to be challenged.

- Critical Questions
- What can we do to support those teachers who are currently experiencing low pass rates?
- How can we prepare our students to be successful on the AP Exam when they choose to take an AP Course?
- What more should be done to encourage students to challenge themselves by taking rigorous Advanced Placement courses?
- How can we evaluate the strength of our current AP courses and the integrity of each?
- Graphic Representation of Data
- Please see next page

## Naidilian CUSDDM

Advanced Placement: Current and Historical Perspective

|  | $\mathbf{0 2 - 0 3}$ | $\mathbf{0 3 - 0 4}$ | $\mathbf{0 4 - 0 5}$ | $\mathbf{0 5 - 0 6}$ | $\mathbf{0 6 - 0 7}$ | $\mathbf{0 7}-\mathbf{0 8}$ | $\mathbf{0 8}-09$ | $\mathbf{0 9 - 1 0}$ | $\mathbf{1 0 - 1 1}$ | $\mathbf{1 1 - 1 2}$ | $\mathbf{1 2 - 1 3}$ | $\mathbf{1 3 - 1 4}$ | $\mathbf{1 4 - 1 5}$ | $\mathbf{1 5 - 1 6}$ | $\mathbf{1 6 - 1 7}$ |

| Courses Exams Were <br> Taken In | 4 | 5 | 5 | 4 | 3 | 4 | 4 | 7 | 7 | 5 | 5 | 5 | 10 | 7 | $\mathbf{7}$ |

A.P. data in almost every category has been relatively stagnant; however, we saw a positive increase in exam pass percentage in 2017.

11 students took the A.P. Spanish Test this year despite the absence of an A.P. Spanish course. The continued interest has led to the offering of a combined Spanish 4/A.P. Spanish Course in 2017-2018.

## Meridian CISDDM3

## CERTIFIED PERSONNEL EVALUATION PROCESS

- What is Being Measured

Certified faculty and staff are evaluated annually using the Danielson Framework for Teaching. The framework includes four domains: Planning and Preparation, The Classroom Environment, Instruction and Assessment Strategies, and Professionalism. A visual representation with more information can be found at: Danielson Framework for Teaching.

- How is it Measured

Tenured faculty and certified staff must be formally observed at least once every other year and evaluated at least once every-other year. Non-tenured faculty and certified staff must be formally observed at least twice per year and evaluated every year until they earn tenure. An expectation of informal observations of faculty and certified staff is also in place, and administrators are encouraged to informally observe all certified personnel at least once per semester. If the information collected during an informal observation is shared with the faculty or certified staff member in writing, then the information can be included in the certified personnel's next evaluation.

## - General Reaction

An administrator's role as the instructional leader for faculty and staff is one of the most critical aspects of the profession. Teacher quality has been consistently identified as the most important school-based factor in student achievement, which adds emphasis to the role of the administrator to ensure that all teachers are skilled practitioners with sound methods of instruction and assessment and a passion for student-focused learning. This year Mr. Voltz and I completed approximately 80 informal observations, walk-through observations, and formal observations. While this is a good start, we must be intentional in our efforts to increase strategic observations with timely feedback and discussions focused on effective, rigorous teaching.

Critical Questions

- How will Student Growth Assessments affect the evaluation process and results after year two of the PERA process in 2017-2018?
- How can we strategically organize informal observations to support the teachers in need of strategic feedback?
- How can we provide additional support, support, and discussion to grown in Domain Components 3 b , 3 c , and 3d?
- Graphic Representation of Data

## Meridian CLSDDM3

LOCAL ASSESSMENT

## - What is Being Measured

The Performance Evaluation Reform Act (PERA) and SB7 state that evaluations must use data and indicators of student growth as a significant factor in rating teacher performance. For this purpose, thirty percent of a teacher's evaluation now represents student growth by collecting multiple data points for each student over time. Teachers choose two different types of tests such as a nationally normed, local to district, or specific to a course to use for the student growth portion of the overall evaluation rating.

- How is it Measured

The 2015-2016 school year was a no-stakes implementation year to see if adjustments needed to be made to the district-created assessments and to plan before full implementation this past school year. Teachers administered mirrored assessments at the beginning and end of the school year. After preassessments were given, student learning objectives (SLO's) were set for each student. Teachers established a mid-point check with the students to determine instructional or SLO adjustments. At the end of the year, post-assessments were given and evaluated to see how many students reached their growth goals.

## - General Reaction

At the end of the first semester of the 2015-2016 school year, several teachers administered their postassessments to informally collect assessment results. This data was helpful in discussions with teachers who were formally evaluated this school year to determine how their assessment data impacted their overall evaluation ratings. The data will also help teachers determine any instructional adjustments to be made before the first year of implementation in 2016-2017.

## - Critical Questions

- What adjustments need to be made to pre/post-assessments to mirror instruction?
- What mid-point adjustments need to be made based on student performance?
- Has the focus on student growth data enhanced classroom instruction?

- Graphic Representation of Data
- Not Available - Final 2016-2017 data will be reviewed over summer 2017, and, with Mr. Mullikin's support, graphs/charts will be constructed as well.

## Meridian CISDDM3

DISCIPLINE

- What is Being Measured

There were not too many bright spots in this year's discipline report for Stillman Valley High School. This past school year there were significant increases in after school detentions ( $54 \%$ increase), Saturday school detentions ( $22 \%$ increase), and in-school suspensions ( $20 \%$ increase). Unfortunately, much of those increases can be attributed to the freshman class. The freshman class accounted for $46 \%$ of all disciplinary referrals. The most significant occurrence responsible for the increase in discipline was the number of times that HEAT was not served ( $55 \%$ increase) this past school year.

As has been stated in previous discipline summaries, the HEAT program does cause the number of after school detentions assigned to increase but also had adverse effects on other disciplinary categories. Some students who chose to ignore their HEAT assignments also chose not to serve their after school detentions. These types of actions then led to assignments of additional detentions, Saturday schools, missed Saturday schools, and in some cases assignment to in-school suspensions. Overall, the HEAT program has proved to be very effective in decreasing the number of D's and F's for sophomore and freshman students through the years.

- How is it Measured

When comparing this year's suspension results to the results from the 15-16 school year there was a net increase of fifty suspensions. In-school suspensions were up by forty-two suspensions, while out of school suspensions increased by eight. Seventy-two of the 266 suspensions were assigned to the freshman class. We tried to utilize in-school suspension as much as possible to avoid assigning out-of-school suspensions. This year we encountered quite a bit of apathetic behavior towards academics and assigned discipline. This behavior led to the sizable increase in suspensions.

- General Reaction

This was our first year implementing a policy that took away a student's privilege to attend Homecoming and/or Prom if the student had accrued more than ten suspension days during the school year. This policy did affect three of our upperclassman students this year. Those three students were not able to attend Prom because they had accumulated ten or more suspension days.

This was the second full school year of allowing students to use their cell phones during their lunch period. A byproduct of the rule change has been an increased entitlement feeling from some of our students that they can use their cell phone anywhere and at any time in our building during the school day. Cell phone violations did increase the first year by almost $33 \%$. This year there was another increase in cell phone
violations of $3 \%$. We intend to keep a close eye on this data in the coming year to help us decide whether or not a revision to this policy should be recommended.

I am not optimistic that the discipline data over the next three years will improve. The reason for my lack of optimism is that the discipline issues for the freshman class continued to be a problem all year. This class has had many discipline related issues since they were in elementary school. We plan to continue to use interventions with many of these struggling students as well as look for alternative placements where necessary to help these young men and women to be successful.

- Critical Questions
- How can we better support our students who have three minors within a quarter?
- What programs or interventions could be implemented to support our at risk students?
- What services are available for parents to help them support their students and our educational initiatives?
- Graphic Representation of Data
- Please see next page

## S.V.H.S. HEAT Program

## Varilian CUSDM

## BUILDING SUBSTITUTE USAGE

- What is Being Measured

Aesop is a web-based program used for teachers to request a substitute for a day or an extended period of time. This program is used for all types of absences inclusive of sick, personal, or professional days. Teachers may request a substitute, pre-arrange a substitute by making a personal contact ahead of time with a person, or randomly be assigned a substitute from the system.

## - How is it Measured

Substitute usage has been tracked by sick, personal, and professional days. Supplemental days have also been tracked, which include substitutes who served as test proctors and/or any long-term substitutes.

- General Reaction

All teachers are given the opportunity to take two professional days to write assessments to be in compliance with the PERA law, or to work on professional material that aligns with our school improvement goals. Also, the new incentive of matching unused sick days that started during 2014-15 school year may have made a more positive difference in days used. Significantly fewer days were used this year than last year.

## - Critical Questions

- How has the attendance incentive of matching unused sick days affected the amount of days teachers took this year compared to years past?
- Were there significant outbreaks of flu and other health-related issues, which impacted the number of sick days used by SVHS Staff?
- Does the lack of snow days affect the number of sick days used?
- Graphic Representation of Data
- Please see next page

## 2) Meriilian CUSDM M

## Counseling Department

- What is Being Measured

Contact data is recorded and tracked regarding academic consults, social/emotional consults, and college/career consults. Outreach, referral services, presentations, and supports are also recorded.

- How is it Measured

The data is measured in terms of the number of meetings, consults, phone calls, etc. The counselors are also using multiple data points to correlate the following data: Counseling appointments w/students who failed one or more core courses in the previous semester, Counseling appointments w/students who are truant (absent 10 or more days), Counseling appointments $w /$ students who have three or more nurse visits per month. This data will be used to more effectively serve our students who are struggling academically, socially, and/or emotionally. It will also help us determine which students are in need of adult mentors in our building for check-in/check-out purposes.

## - General Reaction

Our School Counselors and staff continue to improve the SVHS Counseling Department to provide student-focused meetings, groups, and presentations that meet the ever-changing needs of every individual. Monthly department meetings are led by Mr. Voltz to review student data and revise services as determined necessary by the data.

- Critical Questions
- How can this team work together to improve our SVHS attendance data and graduation rate, especially given the troublesome data of our freshman class?
- How have the online Overgrad and Career Cruising systems been used by our students in preparation for college?
- How will a focus on social/emotional learning impact the number of students seeking or requiring counseling services?
- How can this department solidify the student SMART Goal process?
- Graphic Representation of Data
- Please see next page - Final 2016-2017 Counseling Department data will be analyzed and graphically represented during the summer of 2017.

## SPECIAL EDUCATION

- What is Being Measured

Students identified to receive special education services should have the opportunity to be educated with non-disabled peers in the least-restrictive environment whenever appropriate.

- How is it Measured

The minutes provided in a student's IEP are the minutes of additional support a student must be given to support his or her academic goals. The goal of special education is to have students in the least restrictive environment as much as possible.

- General Reaction

The percentage of time special education students spent in regular education classes decreased slightly this past year. When examining these students, their disabilities warranted placement with additional support. Many of these students required support for autistic tendencies and emotional development, which required more direct contact with the special education teacher.

- Critical Questions
- How are paraprofessionals being used to support these students in the regular education classroom?
- What training needs to be provided for special ed. teachers and paraprofessionals to best meet the needs of the students?
- Does an examination of curriculum within the instructional classes need to be done to ensure student needs are being met?
- Are we cognizant of the EE Code targets? Do we need to review placement data?
- Graphic Representation of Data
- Please see next page

## SIP REVIEW

- What is Being Measured

School wide goals are set by administrators, teachers, students, and parents to improve student achievement. Areas of growth are determined by looking at achievement data and the standards that students are expected to meet.

- How is it Measured

SVHS SIP Goal \#1 for 2015-16 \& 2016-17: The number of students determined to be College \& Career Ready as defined by SVHS based on the attainment of earned Latin Honors criteria, successful Military Enlistment, Illinois State Scholar recognition, National Merit recognition, earned certifications, earning a 3 or better on an Advanced Placement exam, earning a C or better in a Dual Credit Course, benchmark attainment on all applicable PARCC assessments, and/or benchmark attainment on all four ACT components, and/or benchmark attainment on both SAT components will increase by $10 \%$ or more over the next two school years (2015-2016 \& 2016-2017).

SVHS SIP Goal \#2 for 2015-16 \& 2016-17: The number of students successfully earning 20 or more service hours per year will increase by 10\% from 2016 to 2017.

SVHS SIP Goal \#3 for 2016-17 \& 2017-18: The social and emotional wellness of our students and staff will improve over the next two years as evidenced by $100 \%$ of our students, faculty, and staff rating themselves in the satisfactory or better range for social and emotional wellness as evidenced in our engagement surveys administered three times per year.

SVHS SIP Goal \#4 for 2017-2018: Increase the number of SVHS students considered Career-Ready by 10\% over the next year as demonstrated by an increase in internships, apprenticeships, and certifications.

- General Reaction

We met and exceeded our expectations for our CCR Goal and our Community Service Goal. However, we need to continue to focus on the CCR criteria to see these numbers increase, and we need to continue to inform and encourage all students to earn service hours in an effort to create a positive, servant-minded culture among our students, faculty, and staff. The first year of our Social \& Emotional Wellness Goal was focused on educating our Division Leaders, SVHS Faculty, PSAC, \& PPAC members, but we fell short on our plans to implement an SEL curriculum during our Seminar periods. We have a lot of work to do in 2017-2018 with our Social Emotional Wellness Goal.

- Critical Questions
- How can we promote and encourage our students and staff to consistently engage in community service opportunities?
- How will our anticipated SAT benchmark data in spring 2017 compare with our ACT benchmarks and our comparative groups (Local high schools, Low SES high schools, HighPerforming high schools)?
- Graphic Representation of Data
- Please see next page

## SMARTGoal Action Plan

## School: Stillman Valley High School

2015-2016 \& 2016-2017
SIP Goal 1: The number of students determined to be College \& Career Ready as defined by SVHS based on the attainment of Latin Honors criteria, successful
Military Enlistment, Illinois State Scholar recognition, National Merit recognition, earned certifications, earned 3 or bette on an Advanced Placement test, earned a
Cor better in a Dual Credit Course, benchmark attainment on all applicable PARCC assesments, and/or benchmark attainment on all four ACT components,
and/or benchmark attainment on both SAT components will increase by 10\% or more over the next two school years (2015-2016 \& 2016-2017).

## SMARTGoal Action Plan

## School: Stillman Valley High School

```
2015-2016 & 2016-2017
```

SIP Goal 2: The number of students successfully earning 20 or more service hours per year will increase by $10 \%$ from 2016 to 2017.

| SIP or DIP GOAL | Specific Activities and Action Steps | Who is Responsible? | Target Dates and Timelines | Deliverables | Evidence of Effectiveness |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Current Reality: <br> 2015-16:110 Students 2016-17: <br> Division Leaders, PSAC, PPAC, and Admin. implemented our service program in 2015-2016. | Log students' approved Community Service Hours (CSH) into our Skyward System. | Counseling Dept. | Updated at least once per week with final number for each school year determined May $1^{\text {st }}$ of each year. |  <br> Family Access | SKYWARD Reports: <br> Number of students completing CSH \& Number of Community Service Hours logged per student |

## Meridian CISDDM3

## Meridian CUSD \#223 2017-2018 Data Report

Food Service

Board of Education:
Throughout the 2016-2017 school year, I performed a close analysis of
accessible and applicable information to consistently understand the position of the Food Service Department here at Meridian Community Unit School District 223. Moving forward I will continue to track through and document this information in order to share my finding with the Board of Education, Superintendent, District Leadership Team, and department staff to ensure total transparency in communication.

## Comprehensive Data Examination

My intent is to begin to provide the District Office, Board of Education, and Leadership Team the culmination of data dictating the current status of the Food Service Department compare, contrast and report the data on a year to year basis. We begin with the past two year's statistics compared to 2016-2017 school year.

For each group of data presented, we will include:

- An explanation of what is being measured
- How it is being measured
- General reaction to the data
- Critical questions about the subject that should be considered moving forward
- A graphic (if possible)

## Veridian <br> CUSD 12

## Food Service Data Report

## Student Lunch and Breakfast Percentages of Free and Reduced Meals over the 2016-2017 School Year

- What is being measured

Comparing percentage of free and reduced breakfast and lunches served to the students in 2015-2016 year to 2015-2016 school year.

## - How is it measured

Data was gather from last year data report and 2016-2017 school year numbers, data was gather from Skyward then broken down by school building cafeteria and put in to percentage to compare the 2015-2016 year.

## - General Reaction:

- High School breakfast and lunch number have dropped
- Breakfast numbers across the district are still at the low end.
- High School students that are reduced don't take breakfast.

## - Critical Questions

- Are Student from last year to this year have different benefits
- Can we have students that come to school at the last minute grab breakfast to take to the classroom?
- Do we post the breakfast menu on the school website?
- Will numbers go up at the elementary schools with us offering two main lunch items
- Do we change are breakfast menu?

|  |  |  |

## Meridian <br> CUSDDM3

## Total Student Lunch and Breakfast Percentages of Free and Reduced Meals over the 2016-2017 School Year

- What is being measured

Percentage of free and reduced breakfast and lunches served to the students in 2016-2017 school year.

- How is it measured

Total free and reduced students was gather from Skyward for 2016-2017 school years, then added what would be the total of meal sold if every student purchased meal, put that against what was really purchased.

## - General Reaction:

- Breakfast numbers across the district are still at the low end.
- High School students that are reduced don't take breakfast.

## - Critical Questions

- Are Student from last year to this year have different benefits
- Can we have students that come to school at the last minute grab breakfast to take to the classroom?
- Do we post the breakfast menu on the school website?
- Will numbers go up at the elementary schools with us offering two main lunch items
- Do we change are breakfast menu?

## Normal Lunch and Breakfast Counts Over the Past Three Years

- What is Being Measured

Lunch and Breakfast counts over the past three years in category
(Normal)

- How is it Measured

Data was gathered from the Skyward from the end of year reports and put into a graphs for viewing

- General Reaction
- Number of students eating breakfast under the normal lunch price category is increased.
- Are there fewer students in the school district?

## - Critical Questions

- Are there fewer students with free and reduced benefits?
- Do we change the menu to attracted more students?
- How many less students do we have from last year to this year?

## Funds Not Collected from Food Service Lunch Accounts

- What is Being Measured
- Negative Student Lunch Account
- How is it Measured

Data has been gathered from past three years from Skyward at the end of the year report and put into a for line for viewing.

| School Year | $2014-2015$ | $2015-2016$ | $2016-2017$ |
| :--- | :---: | :---: | :--- |
| Unpaid Funds Balance | $\$-6079.64$ | $\$-8309.90$ | $\$-6487.94$ |

- General Reaction
- Funds are not being collected

## - Critical Questions

- How far negative do we let students go before cutting them off?
- Do we start doing cheese sandwich at elementary schools on negative under account balances?
- When student leave are district, are the office staff looking at balance in the food service account?

# Meridian <br> CISDDM3 

## Revenue Generated in 2016-2017 School Year

- What is Being Measured
- Revenue generated by the School Food Service Department through National School Lunch and Breakfast program with the additional revenue from sales of ala carte item's at the High School and Jr. High School
- How is it Being Measured
- Data was gathered from the ISBE web site from the 2014-2015 and 2016-2017 school year additional information was taken from the Skyward system monthly report.
- General Reaction
- Food Service Department is still self supporting

## - Critical Questions

- What other programs can we do to make money?
- Reimbursement is $\$ 3.13$ on free lunches, when do we raise are lunch price?
- How do we get more students to eat lunch to make more revenue?
- Can we get more students to take breakfast?

## Varidian CUSDM2

This Data Shows the Total Revenue Dollars That Have Been Raised by Food Service for the District

|  | $2015-2016$ | $2016-2017$ |
| :--- | :--- | :--- |
| National School Lunch | $\$ 154,258.81$ | $\$ 157,507.48$ |
| National School Breakfast | $\$ 35,049.49$ | $\$ 37,666.44$ |
| 6 Cents Bonus | $\$ 1705.66$ | $\$ 1,667.61$ |
| Revenue Sales |  |  |
| Total Lunch Revenue | $\$ 194,507.05$ | $\$ 180,665.40$ |
| Total Breakfast Revenue | $\$ 11,058.30$ | $\$ 11,702.40$ |
| Total Ala Carte | $\$ 192,435.35$ | $\$ 176,827.05$ |
| Total Revenue | $\$ 589,014.66$ | $\$ 566,036.38$ |

# Meridian CUSDDA3 

# Meridian CUSD \#223 2017-2018 Data Report 

Transportation

Board of Education:
Throughout the 2016-2017 school year, We performed a close analysis of accessible and applicable information to consistently understand the position of the Transportation Department here at Meridian Community Unit School District 223. We will continue to complete thorough write-ups of the information in order to share our findings with the Board of Education, Superintendent, District Leadership Team, and department staff to ensure total transparency in communication.

## Comprehensive Data Examination

Our intent is to begin to provide the District Office and Board of Education a solid understanding of the work performed, and the needs of the Transportation Department. Where data is available, I will begin with last year's statistics compared to this years and will report moving forward yearly.

For each group of data presented, we will include:

- Explanation of what is being measured
- How it is being measured
- General reaction to the data
- Critical questions about the subject that should be considered moving forward
- A graphic (if possible)

## Meridian CUSDDM3

## BUS RIDER CRITERIA MONTHLY CHANGES 2016-17

- What is Being Measured
- Changes to bus riders monthly pick-up or drop-off address
- New riders coming into the district
- Riders discontinuing bus service or moving out of district
- How the ridership numbers change with the sport seasons
- How is it Measured
- Handwritten route changes (add/drop/change) for the purpose of informing drivers
- Counted and tracked in a spreadsheet
- General Reaction
- Able to track possible inconsistencies in route timing due to multiple changes occurring throughout the year
- Increases routing updates/changes in routing system
- Could be able to track specific students who have numerous "permanent" changes to bus stops for the purpose of implementing new criteria to making changes.
- Critical Questions
- Is this a contributing factor adding to daily office work and route changing?
- What if anything can we do to minimalize the number of changes being made on a very regular basis to routes?
- Would implementing and standing firm with number of changes and the timeliness of them discourage multiple changes?
- Graphic Representation of Data
- Please see next 3 sheets

Monthly Bus Changes 2016-17

Total route changes for the 2016-17 school year = 327

Daily Student Ridership

Average Morning Ridership vs. Average Afternoon Ridership

## Meridian CUSDDM3

## MAJOR/MINORS (DISCIPLINE)

- What is Being Measured
- The percentage of Major/Minor that are occurring at each building level
- How is it Measured
- Manually count the Major/Minor Discipline referrals
- Enter into spreadsheet for tracking purposes
- Moving forward we will be tracking using electronic documents in a program with the MJH versus manual tracking.
- General Reaction
- This allows us to track which student group or groups may have the most difficulty in bus riding behavior
- The electronic documents will allow us quicker notification to the building for handling discipline issues.
- Starting in the 2015-16 school year, drivers would speak with the student as well as contact the parent for any minor received on the bus. This is a practice that still continues in 2016-17 with positive feedback from most parents.
- Critical Questions
- What information can we reinforce with riders/students to ensure a safe ride for all as well as desired behavior?

Graphic Representation of Data

- Please see next sheet

Percentage of Minors 2016-2017/School

Count of Minors

Count of Majors

## BUDGET

- What is Being Measured
- The amount of monies being spent in the Transportation Department for the 2016-17 school year.
- How is it Measured
- We closely monitor the budget on a monthly basis
- General Reaction
- Money spent is mainly on equipment and fuel
- Any projects to improve our department area have come at an extremely minimal cost to the district as we have been able to secure donations of time, equipment and funding from community and other stakeholders and will continue to do so.
- Critical Questions
- Is the efficiency of the department as a whole, in a constant state of savings for the betterment of the district?
- Graphic Representation of Data
- Please see next two sheets

## Meridian CISDDM

## 2016-17 Budget Information

| Line Item | Original Budget | Current <br> Purchase | Cost | New Amount Left |
| :---: | :---: | :---: | :---: | :---: |
| Bus Management 1103 | \$97,000 | Directors salary | \$85,863.60 | \$11,136.40 |
| Bus Driver Route Wages 1141 | \$311,000 | Route Driving | \$226,880.36 | \$84,119.64 |
| Bus Driver Trip Wages 1142 | \$30,000 | Trip Driving | \$24,358.82 | \$5,641.18 |
| Special Ed Aide Salaries 1160 | \$14,000 | Bus Aide | \$10,255.77 | \$3,744.23 |
| Sub Route Driver 1241 | \$17,000 | Sub Route Driver | \$24,809.75 | -\$7,809.75 |
| Sub Trip Driver 1242 | \$2,000 | Sub Trip Driver | \$6,453.78 | -\$4,453.78 |
| Medical 2220 | \$45,000 | benefits | \$43,172.22 | \$1,827.78 |
| Professional and Technical 3100 | \$23,000 | Bus Inspections, Driver classes etc. | \$17,187.35 | \$1,827.78 |
| Repairs and Maintenance 3230 | \$60,000 | Bus repairs | \$16,269.57 | \$43,370.43 |
| $\begin{aligned} & \text { Rentals } \\ & 3250 \end{aligned}$ | \$320,000 | Bus Lease \& Insurance Payments | \$316,189.87 | \$3,810.13 |
| Travel 3320 | \$1,200 | Mileage expense | \$542.43 | \$657.57 |
| Supplies 4100 | \$20,000 | Bulbs, filters, monthly supplies | \$10,618.38 | \$9,381.62 |
| Fuel/ Gas 4640 | \$100,000 | Fuel | \$63,465.65 | \$36,534.35 |
| Total Budget | \$1,040,200 | All Expenses | \$893,758.11 | \$146,441.89 |

MILEAGE

- What is Being Measured
- Regular route mileage only
- How is it Measured
- Drivers are required to log all mileage route, trip, special needs etc.
- Totaled monthly and entered into a spreadsheet for totals by individual bus
- General Reaction

This allows us to track number of miles used in a given year per bus and as a total for the district

- Critical Questions
- Are the current routes the most efficient way possible?
- Would less stops in congested areas be more efficient?
- Graphic Representation of Data
- Please see next sheet

Yearly Mileage Comparison

## Mileage breakdown

- We are recording mileage by month, by bus and bus category for our yearly transportation report for use in our data dashboard
- The following spreadsheets show the breakdown of regular route mileage, special education route mileage, Pre-K, Kindergarten, Sporting events and field trips
- You will also notice that the following spreadsheets list mileage by bus number vs. route names. The reason for this is sometimes we use a sub bus on a route for various reasons such as trips, or mechanical issues etc.

## Varidian CUSDM

## Regular Mileage

| BUS\# | July | Aug | Sep | Oct | Nov | Dec | Jan | Feb | March | April | May | TOTAL |

## Fuel Comparison

- What is Being Measured
- The amount of fuel gallons used monthly over the past 3 years
- How is it Measured
- The driver's manually record the fuel gallons every time they fuel their buses
- It is entered into spreadsheet for tracking purposes
- General Reaction
- This allows us to track the amount of fuel being used on a monthly basis
- The breakdown of the amount of fuel being consumed monthly by each bus
- Critical Questions
- Have the new buses help save on fuel consumption?
- Do more group stops help save on fuel?

## Graphic Representation of Data

- Please see next 3 sheets

## Data Dashboard

- What is Being Measured
- Overall statistics of the Transportation Dept. services, on time arrival \% to each school
- How is it Measured
- Drivers manually track arrival and departure times at each school
- Directors or designee manually transfer times into a spread sheet to be entered in the data dashboard
- General Reaction
- This shows the overall percentage of each driver by route
- Critical Questions
- Are there areas within the Route times that we can do a better job
- Graphic Representation of Data
- Please see the following graph for on time \% results

## Meridian CUSDMA

# Meridian CUSD \#223 2017-2018 Data Report 

Health Services

Board of Education:
Throughout the 2016-2017 school year, I regularly analyzed various information that would help me understand the contextual situation of the Health Services Department here at Meridian Community Unit School District 223. Moving forward I will continue to assess this data to measure the effectiveness of the department, and share my findings with the Board of Education, Superintendent, District Leadership Team, and department staff to ensure total transparency in communication.

## Comprehensive Data Examination

The intent is to provide the District Office and the Board of Education with a solid understanding of the Health Services Department and its performance as measured by several indicators over the past year. Below is a summary of the departmental activities and relevant data.

For each group of data presented, I will include:

- Explanation of what is being measured
- How it is being measured
- General reaction to the data
- Critical questions about the subject that should be considered moving forward
- A graphic of the data

Budget

- What is Being Measured?
- Health Services Budget
- How is it Being Measured?
- Monthly reports from our purchase order system, Skyward Finance.
- General Reaction
- Our department focuses on providing cost-effective care to our students. We order supplies on a quarterly basis to keep our costs down. We have 2 supply lines, one for nursing office supplies and one for professional services. This year, we had an excess in the professional services line, so we used it to order more supplies to have on hand when we unexpectedly run out. We make it a point to stay under budget through communication and planning within our department. The district nurses work hard to keep their hours to the scheduled amount of 6 hours per day.
- Questions Moving Forward
- Can we realistically continue to cut our costs without affecting student care?
- Graphic of Data

## Varidien CUSDM

## Salaries, Wages, \& Benefits Budgeted: \$125,500.00

- With
director's
salary as the only remaining expense for FY17,
we are
expected
to stay at least 10\%
under
budget.

- Spent (as of 6/1/17)
- Remaining

## Medicaid Reimbursement

- What is Being Measured?
- The number of minutes billed for Medicaid eligible services on a monthly basis.
- How is it Measured?
- Each building nurse is responsible for submitting billing in the PowerDS system for eligible services they provide. Reports from PowerDS are pulled each month and the minutes are totaled.
- For a nursing service to be considered eligible for Medicaid reimbursement:

1. The student must have an IEP
2. The need for the service must be documented in the student's IEP
3. The student must be eligible for Medicaid per state guidelines

- Other sources of Medicaid Reimbursement (not part of the chart below)
- Evaluation of health history and current health concerns for IEP evaluations, reevaluations, and annual reviews
- Hearing and Vision screening for students with IEPs
- Additional factors influencing monthly reimbursement
- Student attendance
- Number of school days in a given month
- General Reaction
- This is a great way to provide additional revenue for the district. We are already providing the services whether we are reimbursed or not, but it's just the task of going into the system and putting through the billing that we need to do. It is a bit cumbersome, since we are actually documenting the services twice: once in Skyward and once in PowerDS. Between strict guidelines from Medicaid and learning the new system for documenting, it has been challenging to learn the in's and out's of maximizing our Medicaid reimbursement, but we are making it a priority as a department.
- Reimbursement from August 2016-January 2017 totaled approximately $\$ 4,500$ for nursing services. Updated totals for February-May will be updated when available.
- Questions Moving Forward
- Will our numbers improve as we become more comfortable with the PowerDS system and make it part of our culture as a department?
- Are there other services we can provide and bill for to maximize our reimbursement?
- Graphic of Data

## Nursing Office Visits

- What is Being Measured?

The number of office visits by building each month. We also track the number of students sent home and the number of students who have 5 or more office visits within a month.

- How is it Measured?

Each nurse is charts their office visits into Skyward and reports are pulled from Skyward on a monthly basis to gather our data. We also track our "in \& out" visits on a tally sheet each month. These visits may be small things like a request for a Band-Aid or a cough drop that do not require extensive charting into Skyward. These 2 sets of data compose our total monthly number of office visits. The percentage of students sent home is calculated by the number of times a student was sent home out of the total number of office visits for the month. In some of these cases, a parent may choose to pick the student up or allow them to go home vs. the nurse excusing them.

- General Reaction

As you will see in the chart, each nursing office is incredibly busy. Typical office visit reasons include minor complaints like headaches, stomach aches, and sore throats, all the way up those more serious situations that require a 9-1-1 call. The numbers below do not include our pre-scheduled daily visits, for services such as medication administration and care for chronic conditions, such as diabetes.

Some of the ways we help our students with 5 or more visits in a month are by thoroughly assessing them and determining if there may be a mental health component to their frequent visits, then collaborating with our school counselors to help get that particular student the assistance they need. We also work with their families and encourage them to be seen by their physician for chronic health complaints so they can be properly diagnosed and a plan of care can be established while at school. We also work with our office staff and principals to enforce the need for a doctor's note to excuse a student (without obvious ailments) who been absent more than 10 days in a semester.

- Questions Moving Forward
- What kind of wrap around services can we provide to help students stay well?
- What kind of emotional support can we provide to students who need it?

Looking Ahead: 2017-2018 DIP Goals...

## Meridian CISDDM3

## SMART

Department: Health Services
Year: 2017-2018

DIP Goal 1: To decrease the number of students excluded from school due to noncompliance with physical exam and/or immunization requirements

| DIP GOAL | Specific Activities and Action Steps | Who is Responsible? | Target Dates and Timelines | Deliverables | Evidence of Effectiveness |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Current reality: The State of Illinois requires that any student who | Move up first notification to families who are noncompliant by 2 weeks | Building Nurses | September 1st | List of "Exclusion l" letters mailed with dates | Decreased number of families who receive the "Exclusion II" letter that is mailed by October 1st |
| has not met the physical exam and immunization requirements for their grade level is | Increase accessibility of care to low-income families by setting up a mobile care clinic to come to our district | Director of Health Services | July and September | Number of students seen on each clinic date | Increased number of students in compliance with state requirements |
| excluded from school on and after October $15^{\text {th }}$ until the requirements are met. | Utilize all- call and allemail system to remind/notify families who are noncompliant | Building Nurses | Bi-weekly from September $1^{\text {st }}$ October 1st | System report of calls/emails made with dates | Decreased number of students who receive the "Exclusion II" letter that is mailed by October 1st |
| Thirteen students throughout the district were excluded for noncompliance with these state requirements in the 2016/2017 school year. | Personal phone calls made to each family who is still noncompliant after October 1st | Building <br> Nurses | $1^{\text {st }}$ round beginning October $2^{\text {nd }}$ $2^{\text {nd }}$ round beginning October $9^{\text {th }}$ $3^{\text {rd }}$ call to be made on the last school day before Exclusion Day | List of phone calls made with dates | Decreased number of exclusions |

| SMART Goal: <br> Decrease total number of students excluded by 20\% compared to the previous school year | Weekly report to principals and superintendent of number of families who are noncompliant | Building <br>  <br> Director of Health Services | September $1^{\text {st }}$ Exclusion Day | List of students who are not in compliance with state health requirements | Decreased number of exclusions |
| :---: | :---: | :---: | :---: | :---: | :---: |

- General Reaction
- I would not consider our compliance rate "bad", but for each of those 13 students who were excluded from school, per State guidelines, they missed essential time in the classroom. The compliance rate for the 2015-2016 school year was 99.2\%. The 2014-2015 school year had a $99 \%$ compliance rate, and 2013-2014 was at 99.7\%. We will continue to push for a $100 \%$ compliance rate for these health requirements, so no students are excluded from school.
- Questions Moving Forward
- Will offering these additional services and notifications increase compliance?
- Is it possible to reach a $100 \%$ compliance rate?
- Are these additional duties feasible for each building nurse, given the time constraints of their work days?

## Meridian CUSDDM3

## Smart Goals Action Plan

Department: Health Services
Year: 2017-2018

| by $10 \%$ <br> compared to <br> the previous <br> school year |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |

- General Reaction
- In order for us to maximize our Medicaid reimbursement, we must make it priority and part of the culture of our department.
- Questions Moving Forward
- Will our numbers improve as we become more comfortable with the PowerDS system?
- Are there other services we can provide and bill for to increase our reimbursement?

## Smart Goals Action Plan

Department: Health Services
Year: 2017-2018

- General Reaction
- School nursing is a unique and ever-changing specialty of the nursing profession. As the needs of our students change, we must adapt and meet those needs successfully. We will continue to work hard to improve our department.
- Questions Moving Forward
- Can we build an optimal level of trust with faculty and staff even though building nurses may change often? For example, throughout the 2016-2017 school year, 3 new building nurses joined our department.

# Meridian CUSDDA3 

## Meridian CUSD \#223 2016-2017 <br> Data Report

Technology

Board of Education:

Throughout the 2016-2017 school year, we have performed an in depth analysis of accessible and applicable information to consistently understand and improve the position of the Technology Department here at Meridian Community Unit School District 223. Moving forward we will continue to track and document this information in order to share our findings with the Board of Education, Superintendent, District Leadership Team, and district staff to ensure total transparency in communication.

## Comprehensive Data Examination

Our intent is to begin to provide the District Office, Board of Education, and Leadership Team the culmination of data dictating the current status of the Technology Department compared to previous years. In the areas where data is available we will begin to compare, contrast and report the data on a year to year basis. We currently have the previous 3 year's statistics compared to this year for most data points and will add subsequent years to the report moving forward. We fully expect the data we capture to grow over the coming years as we find new ways to look at our data and improve upon our department performance. We included a new metric for this year which is issue type broken down by building.

For each group of data presented, we will include:

- An explanation of what is being measured
- How it is being measured
- General reaction to the data
- Critical questions about the subject that should be considered moving forward
- A chart or table representing the data

## Ticket Creation and Closure Numbers

- What is Being Measured

This measurement shows the number of Technology Department tickets created or closed over the past four years. This measurement will be displayed by both building as well as overall.

- How is it Measured

Every ticket that is created gets maintained and logged in the new ticket system. We are then able to export sum the creation date, closure date, and building of associated tickets.

- General Reaction

The number of tickets created has become stagnant over the past few years. Our percentage of closed tickets has remained high and I am quite pleased with these numbers. Just as with previous numbers the percent complete indicates beginning of summer each year. This data while nice to keep track of is quite high level and does not provide detailed information to indicate areas for change. However, it does give an overview of the effects of other changes we implement using other data.

- Critical Questions
- What measures can be taken to now reduce the influx of tickets on a yearly basis? And why have they been fairly consistent over the past few years?
- How to we maintain the level of service we have attained over the past year?

Ticket Creation/Closure Overview

## Meridian CUSDM 13

## Year by Year Comparison

## Average Ticket Closure Time

- What is Being Measured

The Average time it takes from creation of a ticket to closure of a ticket on a per-building as well as overall basis. Also included is the $\%$ of tickets closed within 24/48 hours

- How is it Measured

Every ticket that is created gets maintained and logged in the ticket system. We are then able to export sum the creation date, closure date, and building of associated tickets. With that data we are then able to ascertain the average time to close per ticket.

- General Reaction

We are now on the second year measuring $\%$ tickets closed within 24/48 hours. The reason this was started was that I was looking at a way to account for the longer tickets that are put in for summer break issues and other tickets that are for future closure. However, this will do even better and really show us how well we are serving our customers. Not just showing us that we have a number of big project type tickets. Which is captured really well this year when you notice our average close time increasing while our percentage quick closes increased. Last year I stated that I would like to see these numbers increase by around $10 \%$ to $80 \%$ for the 48 -hour mark. And we did just that. Our 24 -hour mark even went up by $21 \%$ which was very awesome to see. Monroe center making up for the largest portion of this with the addition of Ben to the staff. Our goal for next year is to bring each of those numbers up another $5 \%$.

- Critical Questions
- How do we ensure that we can continue to increase this level of service?
- What else can be done to further reduce the time to close for tickets?

## Meridian CISDDM3

Average Ticket Close Time
$3.5-100 \%$

# Meridian CISDDM3 

## First Contact Time

- What is Being Measured

The amount of time from ticket creation to the first time a user is contacted regarding their ticket.

- How is it Measured

Every ticket that is created gets maintained and logged in the new ticket system. We are then able to export the creation date and the first response time to the ticket as well as any other documented responses to the tickets. What this does not account for is any non-ticket system based responses.

- General Reaction

Last year I had mentioned adding a percentage of tickets that were closed under our goal. I have added that this year. Once again response time according to the data available is nowhere near where we would like it to be. We would like this to be under 24 hour's average per ticket. I think the biggest concern with this which is left over from last year is the fact that initial correspondence on a ticket may be made in some manner other than in the ticket system and then not notated. This is a procedural change that will need to take place to get a more accurate representation of first contact time.

- Critical Questions
- How do we ensure the processes are in place to capture all correspondence on tickets rather than just answering or contacting someone via e-mail/phone and not updating it in the ticket?

## Time Spent Per Ticket

- What is Being Measured

The average amount of time per minute that is spent per ticket in each building

- How is it Measured

Every ticket that is created gets maintained and logged in the new ticket system. We are then able to export the amount of time spent on each ticket and pull the average from there.

- General Reaction

I am honestly not sure if this data will be useful at all as broad as it is. I believe we may need to add more specifics to this data for it to really be useful to us. Such as how long is spent on certain types of tickets or issues as opposed to just average time it takes to close an issue.

- Critical Questions
- Now in the second year with this data. I am still trying to see what will come of it and if it is going to show any trends that may need addressed. If I don't see any benefit to this data, I will likely drop it next year in favor of something else.

## Meridian CISDDM

## Number of Tickets by Type

- What is Being Measured

The number of tickets by overall type

- How is it Measured

Every ticket that is created gets maintained and logged in the new ticket system. We are then able to export the issue that is chosen by the end user when submitting the ticket.

- General Reaction

This is the first year measuring this data. As of now I can see some obvious areas of focus for next year such as why we have so many printer tickets in the district with so few district provided printers. My main concern with the data in this format is yes we may be able to tell where we are having the most problems and it gives us somewhere to look. But if we can have more granular data right off the bat it will save us time in investigating and locating major areas of concern. I can get more granular with this data and I may do just that on next year's report if I feel it will be more beneficial. I also removed general computer issue from this graph as it made the rest of the data fairly unreadable in graph format

- Critical Question
- Is this data granular enough to take quick and effective preventative action?

## Meridian CISDDM

Number of Tickets by Type

## Survey Data Comparison

- What is Being Measured

A year to year comparison of the responses of MCUSD staff in regards to their perception of the state of the Technology Department in the areas of customer service, district technology related services, and technology related devices

- How is it Measured

A survey is sent out on a yearly basis to collect and monitor data. Not all survey data is represented here. However, all pertinent data is represented.

- General Reaction

The same applies as last year. Based on our data, the overall perception of the department in the eyes of the staff continues to improve. As a result, even more staff than last year are putting their faith in the department to solve their issues both skill wise and in a timely manner creating an influx of tickets and increase in positive reviews over last year.

- Critical Questions
- How do we continue to maintain the growth?
- What areas did we grow less than others?
- Is there anything we are not asking that we should be?

## Varidian CUSDM

Overall, I am satisfied with the computing environment at Meridian CUSD \#223.

## Meridian CISDDM3

Overall, I am satisfied with the quality and reliability of services provided by the Technology Department

## Meridian CISDDM3

What level of confidence do you have in the Technology Department to deliver the services that you require?

I know who to contact when I have a technology question or problem

I know what services the Information Technology Department provides to the district.

Overall how satisfied are you with the response times the Technology Department has had to your issues?

## Meridian CUSDMM

How of often do you experience Tech related issues? (Round to the nearest answer)

## Meridian CUSDMM

When you have a technology related issue how do you typically resolve it?
